Annual Review of Microbiology

Volume 59, 2005

Contents

Frontispiece
Georges N. Cohen xiv

Looking Back
Georges N. Cohen 1

Signaling in the Arbuscular Mycorrhizal Symbiosis
Maria J. Harrison 19

Interplay Between DNA Replication and Recombination in Prokaryotes
Kenneth N. Kreuzer 43

Yersinia Outer Proteins: Role in Modulation of Host Cell Signaling Responses and Pathogenesis
Gloria I. Viboud and James B. Bliska 69

Diversity and Evolution of Protein Translocation
Mechthild Pohlschröder, Enno Hartmann, Nicholas J. Hand, Kieran Dilks, and Alex Haddad 91

Alternative *Candida albicans* Lifestyles: Growth on Surfaces
Carol A. Kumamoto and Marcelo D. Vinces 113

Yeast Evolution and Comparative Genomics
Gianni Liti and Edward J. Louis 135

Biology of Bacteriocyte-Associated Endosymbionts of Plant Sap-Sucking Insects
Paul Baumann 155

Genome Trees and the Nature of Genome Evolution
Berend Snel, Martijn A. Huynen, and Bas E. Dutilh 191

Cellular Functions, Mechanism of Action, and Regulation of FtsH Protease
Koreaki Ito and Yoshinori Akiyama 211

Mating in *Candida albicans* and the Search for a Sexual Cycle
R.J. Bennett and A.D. Johnson 233

Applications of Autofluorescent Proteins for In Situ Studies in Microbial Ecology
Estibaliz Larrainzar, Fergal O'Gara, and John P. Morrissey 257

The Genetics of the Persistent Infection and Demyelinating Disease Caused by Theiler's Virus
Michel Brahic, Jean-François Bureau, and Thomas Michiels 279

Intracellular Compartmentation in Planctomycetes
John A. Fuerst 299

Biogenesis of Inner Membrane Proteins in *Escherichia coli*
Joen Luirink, Gunnar von Heijne, Edith Houben, and Jan-Willem de Gier 329

Genome-Wide Responses to DNA-Damaging Agents
Rebecca C. Fry, Thomas J. Begley, and Leona D. Samson 357

The Rcs Phosphorelay: A Complex Signal Transduction System
Nadim Majdalani and Susan Gottesman 379

Translational Regulation of *GCN4* and the General Amino Acid Control of Yeast
Alan G. Hinnebusch 407

Biogenesis, Architecture, and Function of Bacterial Type IV Secretion Systems
Peter J. Christie, Krishnamohan Atmakuri, Vidhya Krishnamoorthy, Simon Jakubowski, and Eric Cascales 451

Regulation of Bacterial Gene Expression by Riboswitches
Wade C. Winkler and Ronald R. Breaker 487

Opportunities for Genetic Investigation Afforded by *Acinetobacter baylyi*, A Nutritionally Versatile Bacterial Species that is Highly Competent for Natural Transformation
David M. Young, Donna Parke, and L. Nicholas Ornston 519

The Origins of New Pandemic Viruses: The Acquisition of New Host Ranges by Canine Parvovirus and Influenza A Viruses
Colin R. Parrish and Yoshihiro Kawaoka 553

Vaccine-Derived Polioviruses and the Endgame Strategy for Global Polio Eradication
Olen M. Kew, Roland W. Sutter, Esther M. de Gourville, Walter R. Dowdle, and Mark A. Pallansch 587

INDEXES

Subject Index 637

Cumulative Index of Contributing Authors, Volumes 55–59 675

Cumulative Index of Chapter Titles, Volumes 55–59 678

ERRATA

An online log of corrections to *Annual Review of Microbiology* chapters may be found at http://micro.annualreviews.org/

Subject Index

A

Acinetobacter baylyi
absence of gene clustering, 527–28
catabolic islands, 527
chromosomal organization of genes for catabolic activities, 523–27
cloning, 530
coevolving gene communication, 528–30
compartmentation, 534–35, 537
complex physiological systems, 534–37
conclusions, 538
designed mutations, 532
Escherichia coli, 530
evolutionary divergence, 535, 537–38
future research, 539
genetic diversity, 527–31
genetic variation, 535, 537–38
glucose catabolism, 534–36
heterologous genes, 534
insertion sequences, 530–31
introduction, 520–21
IS*1236*, 530–31
mapping mutations, 531
mutation sources, 531–34
pathogenicity islands, 527
PCR-generated mutations, 532–34
protocatechuate catabolism, 523–26
Pseudomonas, 520–21
pyruvate kinase catabolism, 534–36
quinate catabolism, 535–37
regulation, 534
shikimate catabolism, 535–37
spontaneous mutations, 531–32
strain ADP1, 521–22
suberon, 523–26
summary, 538–39
supraoperonic clustering, 523
taxonomy, 521–22
transport, 534
unstable mutations, 531–32
Acinetobacter spp.
history of research, 13–14
Acquired immunodeficiency syndrome (AIDS)
Candida albicans growth on surfaces and, 114, 126
Actins
Yersinia outer proteins and, 75, 80, 82
Acyl-homoserine lactone
Rcs phosphorelay system and signal transduction, 396
Acyrthosiphon pisum
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 167–68, 174, 177
Adaptation
origins of new pandemic viruses and, 553, 558, 567, 571, 575, 577
Adaptive immunity
Theiler's virus and, 290
Yersinia outer proteins and, 69, 73–75, 77, 85
Adenine riboswitch
riboswitches in regulation of gene expression and, 494, 499–500
Adhesins
Yersinia outer proteins and, 71
Adhesion
Candida albicans growth on surfaces and, 118, 127
adk genes

diversity and evolution of protein translocation, 103
Aequorea victoria
diversity and evolution of protein translocation, 101
Aeromonas hydrophila
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Agrobacterium tumefaciens
intracellular compartmentation in Planctomycetes and, 304
type IV secretion systems and, 451–75
Alb3 protein
diversity and evolution of protein translocation, 91–104
Aleurodicus spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158
Aleuroplatus gelatinosus
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158
Aleyrodes spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158
Aleyrodinae
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 166
Alignment-free genome trees
genome trees and, 191, 194–95, 204
Allostery
history of research, 1
riboswitches in regulation of gene expression and, 487, 498, 509–11
Allotetraploidy
yeast evolution and comparative genomics, 137–38
ALT pathway
DNA replication and recombination interplay in prokaryotes, 59
Ambiguous VDPVs (aVDPVs)
vaccine-derived polioviruses and global polio eradication, 604, 609–12, 615
Amino acid control
regulation of *GCN4* translation and, 407–37
p-Aminobenzoate
history of research, 4–5
Aminoethylcysteine
riboswitches in regulation of gene expression and, 502
3-Aminotriazole
genome-wide responses to DNA-damaging agents and, 363
Ammonium oxidation
intracellular compartmentation in Planctomycetes and, 312–16
Anaerobes
history of research, 1, 4–5
Anaerobic ammonium-oxidizing chemolithoautotrophic planctomycetes
intracellular compartmentation in Planctomycetes and, 299, 312–16
Anammoxosome
intracellular compartmentation in Planctomycetes and, 299, 304–6, 308, 312–16
Aneuploidy
yeast evolution and comparative genomics, 135, 137–38, 140–41
Anthozoa spp.
autofluorescent proteins for microbial ecology in situ studies and, 262
Anthranilic acid
history of research, 5
Antibiotic resistance
autofluorescent proteins for microbial ecology in situ studies and, 270
Antigenic drift
origins of new pandemic viruses and, 556
Antisense RNA
riboswitches in regulation of gene expression and, 508
Antonina pretiosa
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Aphids
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155, 167–68
Aplysina aerophoba
intracellular compartmentation in Planctomycetes and, 317
Apoptosis
Theiler's virus and, 284–85, 290
Yersinia outer proteins and, 69, 74, 76, 80–81, 84–85
Appressorium
signaling in arbuscular mycorrhizal symbiosis and, 25
Aptamers
riboswitches in regulation of gene expression and, 487–511
Aquifex spp.
diversity and evolution of protein translocation, 103
genome trees and, 202

Aquificales spp.
intracellular compartmentation in Planctomycetes and, 305
Arabidopsis thaliana
autofluorescent proteins for microbial ecology in situ studies and, 267
signaling in arbuscular mycorrhizal symbiosis and, 31
yeast evolution and comparative genomics, 137
Arbuscular mycorrhizal symbiosis
signaling in
appressoria formation, 25
arbuscular mycorrhiza, 20
cell autonomous/cell nonautonomous signaling, 27–29
defense response signaling, 29–30
development of symbiosis, 21–22
endosymbiotic phase, 25–31
fungi, 20–24
introduction, 20–22
lateral root formation, 30–31
legumes, 25–27
phosphate starvation, 30–31
plants, 24
signaling prior to physical interaction between symbionts, 22–24
summary, 31–32
systemic signaling, 30–31
Archipelago of catabolic diversity
Acinetobacter baylyi and, 527, 539
Arrested replication forks
DNA replication and recombination interplay in prokaryotes, 53–55
Arsenic
genome-wide responses to DNA-damaging agents and, 366
Arum-type arbuscular mycorrhizal symbiosis
signaling in arbuscular mycorrhizal symbiosis and, 22
Ashbya gossypii
yeast evolution and comparative genomics, 142–44
Aspartate kinases
history of research, 11–12
Aspergillus spp.
translational regulation of *GCN4* and amino acid control of yeast, 408
atpAGD genes
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 164
ATPases
FtsH protease and, 211–25
type IV secretion systems and, 463, 471
Attenuation
riboswitches in regulation of gene expression and, 487, 506–7
vaccine-derived polioviruses and global polio eradication, 587, 593–96
Australicoccus grevilleae
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Autofluorescent proteins (AFPs)
for in situ studies in microbial ecology
applications, 265–71
biofilms, 269–70
biosensors, 268–69
characterization, 259–60, 262–63
cloning, 259–60
common variants, 262, 264
derivation, 262–63
detection in microbial cells, 264–65
development, 259–63
DsRed proteins, 262–64
future research, 271
gfp, 259–60
GFP, 259–61
historical perspective, 259–63
horizontal gene transfer, 270–71
identification, 259, 261–62
introduction, 258–59
microbe-plant interactions, 266–68
red fluorescent proteins, 261–63
summary, 271
Autoimmunity
Theiler's virus and, 291
Autonomous signaling
signaling in arbuscular mycorrhizal symbiosis and, 27–29, 32
Autotetraploidy
yeast evolution and comparative genomics, 137–38
Average sequence similarity
genome trees and, 191, 194, 198–99
Azospirillum brasiliensis
autofluorescent proteins for microbial ecology in situ studies and, 267

B

Bacillus anthracis
riboswitches in regulation of gene expression and, 502–7
Bacillus subtilis
diversity and evolution of protein translocation, 98–100, 103

DNA replication and recombination interplay in prokaryotes, 53, 59
genome trees and, 196
history of research, 10
inner membrane protein biogenesis in *Escherichia coli* and, 333, 345
intracellular compartmentation in Planctomycetes and, 303
riboswitches in regulation of gene expression and, 488, 490, 499–502
Bactericera cockerelli
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Bacteriocyte-associated endosymbionts
of plant sap-sucking insects
aphids, 167–68
Baumannia, 170–71
Buchnera, 167–68, 176–77
Carsonella, 162–65
DNA analysis, 164–65, 167–70
evolutionary dynamics, 171–76
future directions, 179–81
genome, 167–68, 171, 173–74
introduction, 156–59
mealybugs, 168–70
note, 181
P-endosymbionts, 159–72
phylogeny, 164, 166–67, 169–71
plasmids, 176–77
Portiera, 165–67
pseudogenes, 174–76
psyllids, 162–63
rate of sequence of change, 171–73
sharpshooters, 170–71
speculations, 179–81
S-symbionts, 177–79
Tremblaya, 168–70
whiteflies, 165–67
Bacteroides spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 171
Baizongia pistaciae
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 167
Bartonella henselae
type IV secretion systems and, 458, 468–69
Baumannia spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160–62, 170–71, 173
B cells
Yersinia outer proteins and, 73, 77
BCNU
genome-wide responses to DNA-damaging agents and, 361–62
Bemisia spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158, 160
Bifurcation
pathway
type IV secretion systems and, 463–64
Biofilms
autofluorescent proteins for microbial ecology in situ studies and, 257–58, 268–71
Candida albicans growth on surfaces and, 113, 115–19, 127
Rcs phosphorelay system and signal transduction, 379, 390, 394–95, 398
Biosafety level
vaccine-derived polioviruses and global polio eradication, 621
Biosensors
autofluorescent proteins for microbial ecology in situ studies and, 257, 268–69
BLAST program
genome trees and, 198–99
intracellular compartmentation in Planctomycetes and, 318
yeast evolution and comparative genomics, 137
Blastospirella spp.
intracellular compartmentation in Planctomycetes and, 304–8
Blattabacterium spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158
blfA gene
FtsH protease and, 213
Blochmannia spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158, 160, 171, 173–75
Blumeria graminis
signaling in arbuscular mycorrhizal symbiosis and, 30
BMH1 gene
Candida albicans growth on surfaces and, 121
Bordetella spp.
type IV secretion systems and, 456, 459, 464, 467
Borrelia burgdorferi
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
diversity and evolution of protein translocation, 103

Branch migration
DNA replication and recombination interplay in prokaryotes, 45–46
Branch-specific nuclease
DNA replication and recombination interplay in prokaryotes, 52
Brocadia anammoxidans
intracellular compartmentation in Planctomycetes and, 304, 306, 308, 312, 314–16
Brucella spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
type IV secretion systems and, 456, 467
btub genes
intracellular compartmentation in Planctomycetes and, 317
riboswitches in regulation of gene expression and, 507
Buchnera spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155, 158, 160–62, 167–68, 172–77, 179
genome trees and, 196–97
Burkholderia spp.
Acinetobacter baylyi and, 520
autofluorescent proteins for microbial ecology in situ studies and, 269
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
type IV secretion systems and, 467–68
Butanol–acetone fermentation
history of research, 4
Butyric acid fermentation
history of research, 4

C

CII protein
FtsH protease and, 215
Caenorhabditis elegans
genome-wide responses to DNA-damaging agents and, 359, 365–66, 368
CAG1 gene
mating and sexual cycle in *Candida albicans*, 247
Calcium signaling
signaling in arbuscular mycorrhizal symbiosis and, 26–27
Yersinia outer proteins and, 75, 77, 84
Calophyla schini
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Camponotus floridanus
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Campylobacter jejuni
type IV secretion systems and, 457
Cancer
DNA replication and recombination interplay in prokaryotes, 53, 59
Candida albicans
growth on surfaces and
adherence, 118
amino acid biosynthesis, 117–18
animal models, 118–19
biofilms, 115–19
colonization, 115
conclusions, 126
drug resistance, 115–17
embedded cells, 120–23
endothelial surfaces, 119
epidermal surfaces, 119
epithelial surfaces, 119
filamentation, 120–21
hyphae, 119, 125–26
implanted medical devices, 115–16
introduction, 114
invasive growth, 119–25
models, 124–25
mutations, 118
phospholipase, 119–20
physical contact, 120–21
protease, 119–20
protein synthesis, 117–18
regulation, 120–23
signaling pathways, 123–24
summary, 126–27
thigmotropism, 125–26
transcription factors, 120–23
mating and sexual cycle in
cell biology, 247–48
chromosome loss, 249–50
completing mating cycle, 249
conserved mating signaling cascade, 244–47
future perspectives, 250–51
hemoglobin, 242
host factors, 242–44
introduction, 234–35
MAPK pathway, 246–47
mating in other *Candida* species, 249–50
mating pathways, 240–47
meiosis, 249–50
MTL, 235–38
pheromone, 244–47

priming to mate, 239–40
regulation, 242–44
tetraploids, 249–50
transcriptional circuit controlling mating, 240–42
white–opaque switching, 238–40
yeast evolution and comparative genomics, 141, 143–44
Candidatus spp.
intracellular compartmentation in Planctomycetes and, 304, 306, 308, 312, 314–16, 318
Canine parvovirus
origins of new pandemic viruses and, 553–56, 561–67, 571–75, 577–78
Capsid protein
origins of new pandemic viruses and, 553, 572–73
Capsule synthesis
Rcs phosphorelay system and signal transduction, 379–80, 387–88
Carbon
signaling in arbuscular mycorrhizal symbiosis and, 19–20, 27
yeast evolution and comparative genomics, 145
Carbon dioxide (CO_2)
history of research, 7
signaling in arbuscular mycorrhizal symbiosis and, 23
Cardiovirus genus
Theiler's virus and, 280, 282–84
Carsonella spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155, 160–65, 173, 179
Caspases
Yersinia outer proteins and, 78
Catabolism
Acinetobacter baylyi and, 519, 523–27
cat genes
Acinetobacter baylyi and, 524, 527–30, 539
CCaMK
signaling in arbuscular mycorrhizal symbiosis and, 26–27, 31
CDR genes
Candida albicans growth on surfaces and, 117, 119
CEK genes
Candida albicans growth on surfaces and, 121
mating and sexual cycle in *Candida albicans*, 246–47
Cell biology
mating and sexual cycle in *Candida albicans*, 233, 247–48
Cell cycle
genome-wide responses to DNA-damaging agents and, 357–58, 363, 366, 370
mating and sexual cycle in *Candida albicans*, 233, 249–51
Cell surface perturbations
Rcs phosphorelay system and signal transduction, 393–94
Central nervous system (CNS)
Theiler's virus and, 279–92
Centre National de la Recherche Scientifique (CNRS)
history of research, 1, 7, 11, 13
Chaperones
diversity and evolution of protein translocation, 101–2
FtsH protease and, 224–25
inner membrane protein biogenesis in *Escherichia coli* and, 336, 338, 346
Yersinia outer proteins and, 78
Checkpoints
cell cycle
genome-wide responses to DNA-damaging agents and, 357–58, 366, 370
substrate recognition
type IV secretion systems and, 469–70
Chemiluminescence
autofluorescent proteins for microbial ecology in situ studies and, 260
Chemokines
Theiler's virus and, 282–83, 290
Yersinia outer proteins and, 75, 77, 84
CHK1 gene
Candida albicans growth on surfaces and, 121, 124
Chlamydia spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
intracellular compartmentation in Planctomycetes and, 305, 317
Chloroplasts
history of research, 7
Chlorpromazine
Rcs phosphorelay system and signal transduction, 394
Chromosomal gene order
genome trees and, 191, 194, 197–98
Chromosomal rearrangements
yeast evolution and comparative genomics, 135, 137–38

Chromosome loss
mating and sexual cycle in *Candida albicans*, 249–51
Circulating VDPVs (cVDPVs)
vaccine-derived polioviruses and global polio eradication, 604, 606–9, 612–16
CIT1 gene
yeast evolution and comparative genomics, 141
Citrobacter freundii
Rcs phosphorelay system and signal transduction, 387
Cladistics
genome trees and, 198
intracellular compartmentation in Planctomycetes and, 308
origins of new pandemic viruses and, 559–65
Classification
genome trees and, 191
riboswitches in regulation of gene expression and, 492–99
Cleavage of blocked fork
DNA replication and recombination interplay in prokaryotes, 52
Cloning
Acinetobacter baylyi and, 530
autofluorescent proteins for microbial ecology in situ studies and, 259–60
signaling in arbuscular mycorrhizal symbiosis and, 19, 25
Clostridium spp.
history of research, 4
riboswitches in regulation of gene expression and, 508
Cluster homology regions
yeast evolution and comparative genomics, 136–37, 144
Clusters of orthologous groups (COGs)
genome trees and, 196, 200–1, 203
Coenzyme B_{12} riboswitch
riboswitches in regulation of gene expression and, 494, 501
Coevolution
Acinetobacter baylyi and, 528–30
Cohen GN, 1–14
Colonization
Candida albicans growth on surfaces and, 115, 127
Commensalism
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 156
Common variable immunodeficiency (CVID)
vaccine-derived polioviruses and global polio eradication, 606
Comomonas spp.
Acinetobacter baylyi and, 520
Comparative genomics
genome trees and, 191
yeast evolution and comparative genomics, 329–46
Compartmentation
Acinetobacter baylyi and, 534–35, 537
intracellular compartmentation in Planctomycetes and, 299–322
Competence
type IV secretion systems and, 453
Complete genome
genome trees and, 191
Computational data integration
genome-wide responses to DNA-damaging agents and, 369–70
Concatenated sequences
genome trees and, 199–202
Confocal scanning laser microscopy (CSLM)
autofluorescent proteins for microbial ecology in situ studies and, 263, 265–66, 268, 270
Conjugation
type IV secretion systems and, 451–75
CONSENSE program
genome trees and, 201
Conservation of function
translational regulation of *GCN4* and amino acid control of yeast, 425–26
Conserved mating signaling cascade
mating and sexual cycle in *Candida albicans*, 244–47
Conserved regulatory sites
yeast evolution and comparative genomics, 145–46
Contingency mutations
Acinetobacter baylyi and, 532
Conventional repair pathways
DNA replication and recombination interplay in prokaryotes, 50
Conversion
yeast evolution and comparative genomics, 137–38
Core complex
type IV secretion systems and, 461
Coronaviruses
origins of new pandemic viruses and, 554, 578
Cortical cells
root

signaling in arbuscular mycorrhizal symbiosis and, 19–32
COS1 gene
Candida albicans growth on surfaces and, 121, 124
Cotranslation
inner membrane protein biogenesis in *Escherichia coli* and, 329–30
Covariation
yeast evolution and comparative genomics, 146
Coxiella burnetii
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
CPH1 gene
Candida albicans growth on surfaces and, 120–23
mating and sexual cycle in *Candida albicans*, 246
CPP1 gene
Candida albicans growth on surfaces and, 121
cps genes
Rcs phosphorelay system and signal transduction, 381, 384–85, 387–90, 393–94
cpxR gene
Rcs phosphorelay system and signal transduction, 391–92
Cre reporter assay for translocation (CRAfT)
type IV secretion systems and, 465, 469
Crk-associated substrate
Yersinia outer proteins and, 75
Cryphonectria parasitica
mating and sexual cycle in *Candida albicans*, 235
CST20 gene
Candida albicans growth on surfaces and, 121
mating and sexual cycle in *Candida albicans*, 246
C-terminal
type IV secretion systems and, 468–69
Yersinia outer proteins and, 79
Cysteine proteases
Yersinia outer proteins and, 79–81, 83
cytB gene
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 159–60
Cytokines
Theiler's virus and, 279, 281–85, 290–91
Yersinia outer proteins and, 69, 73–74, 76, 78, 82–84
Cytoplasmic membrane protein
FtsH protease and, 211–25
Cytotoxic T lymphocytes
Theiler's virus and, 287–88, 291
CZF1 gene
Candida albicans growth on surfaces and, 120–25

D

D10 genes
Theiler's virus and, 289
Daktulosphaira vitifoliae
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Damage recovery pathways
genome-wide responses to DNA-damaging agents and, 369–70
Daughter strand gap repair
DNA replication and recombination interplay in prokaryotes, 50, 55, 60
dca genes
Acinetobacter baylyi and, 523–24, 526, 528
Debaryomyces hansenii
yeast evolution and comparative genomics, 142–43
Defense response signaling
signaling in arbuscular mycorrhizal symbiosis and, 29–30
Degradation
FtsH protease and, 211–25
genome-wide responses to DNA-damaging agents and, 357, 369
translational regulation of *GCN4* and amino acid control of yeast, 435–36
Deinococcus radiodurans
DNA replication and recombination interplay in prokaryotes, 59
inner membrane protein biogenesis in *Escherichia coli* and, 336
Deletions
yeast evolution and comparative genomics, 135, 137–39, 141–42
Demyelination
Theiler's virus and, 279–92
Designed mutations
Acinetobacter baylyi and, 532
Developed countries
vaccine-derived polioviruses and global polio eradication, 596, 598–99, 602–3, 605–6, 608–16
Developing countries
vaccine-derived polioviruses and global polio eradication, 587, 589, 596, 598–603, 605–8, 610–16
Development
autofluorescent proteins for microbial ecology in situ studies and, 259–63

Candida albicans growth on surfaces and, 115–19
Rcs phosphorelay system and signal transduction, 379, 394–95, 398
signaling in arbuscular mycorrhizal symbiosis and, 21–22
vaccine-derived polioviruses and global polio eradication, 593, 596–97
DGGE/TTGE
autofluorescent proteins for microbial ecology in situ studies and, 258
Dialeorodes bongkongensis
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158
(4,6-Diamidino-2-phenylindole)
intracellular compartmentation in Planctomycetes and, 311
dif genes
DNA replication and recombination interplay in prokaryotes, 58
Diffusible signal
signaling in arbuscular mycorrhizal symbiosis and, 24
Dimerization
DNA replication and recombination interplay in prokaryotes, 58, 60
diversity and evolution of protein translocation, 101
din genes
genome-wide responses to DNA-damaging agents and, 359–61
Diploidy
DNA replication and recombination interplay in prokaryotes, 50
genome-wide responses to DNA-damaging agents and, 365
mating and sexual cycle in *Candida albicans*, 233, 238–39, 248–49
Direct restart pathways
DNA replication and recombination interplay in prokaryotes, 53
Discosoma striata red fluorescent protein (DsRed)
autofluorescent proteins for microbial ecology in situ studies and, 257, 261–64, 268, 270–71
Dislocation
FtsH protease and, 211–25
Disseminated candidiasis
Candida albicans growth on surfaces and, 113, 126
Diuraphis noxia
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Divergence
Acinetobacter baylyi and, 535, 537–38
yeast evolution and comparative genomics, 137–38, 140
Diversity
Acinetobacter baylyi and, 525, 527–31, 539
evolution of protein translocation and, 91–104
inner membrane protein biogenesis in *Escherichia coli* and, 333–34
djlA gene
Rcs phosphorelay system and signal transduction, 392–94
DLH1 gene
mating and sexual cycle in *Candida albicans*, 249
D-loop recombination intermediate
DNA replication and recombination interplay in prokaryotes, 43, 45, 47, 49, 59–60
DMC1 gene
mating and sexual cycle in *Candida albicans*, 249
dmi genes
signaling in arbuscular mycorrhizal symbiosis and, 21, 26–27
DNA-damaging agents
genome-wide responses to
Caenorhabditis elegans, 366, 368
computational data integration, 369–70
damage recovery pathway identification, 369–70
environmental stress response, 363–64
Escherichia coli, 359–61
future research, 370–73
genomic phenotyping, 365–66
global transcriptional responses to damaging agents, 359–65
introduction, 358–59
mammalian systems, 364–65
networks, 368–69
phenotypic profiling, 365–66
proteins involved in damage repair, 365–68
RNAi-based screening, 366–8
Saccharomyces cerevisiae, 360–69
SOS response, 359–61
stress response, 363–65
summary, 372–73
systems responses, 368–70
transcriptional profiling, 366
dna genes
Acinetobacter baylyi and, 538
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 170

DNA replication and recombination interplay in prokaryotes, 51, 58
Rcs phosphorelay system and signal transduction, 397
DNA repair
DNA replication and recombination interplay in prokaryotes, 43
genome-wide responses to DNA-damaging agents and, 357–73
DNA replication and recombination interplay in prokaryotes
arrested replication forks, 53–55
conclusions, 56, 59
direct restart on intact fork, 54
DNA damage, 50–51
DNA dynamics, 54–55
DNA repair, 48–51
double-strand breaks, 48–50
double-strand ends, 48
end coordination, 48–49
ends-apart recombination, 49–50
frequency of DNA replication rescue, 55, 57–58
homologous recombination, 44–48
introduction, 44
protein dynamics, 53
replication fork blockage and restart without fork breakage, 53–56
restarting broken forks, 51–53
SOS pathway, 58–59
summary, 57, 60
terminal recombination after DNA replication, 58
DNA transfer
type IV secretion systems and, 451–75
Double-strand breaks (DSB)
DNA replication and recombination interplay in prokaryotes, 48–50
Double-strand ends
DNA replication and recombination interplay in prokaryotes, 48
Drosophila spp.
history of research, 6–7
Drug refractory infections
Candida albicans growth on surfaces and, 115–17, 127
Drug targets
riboswitches in regulation of gene expression and, 510–11
dsbA gene
Rcs phosphorelay system and signal transduction, 393
dsrA gene
Rcs phosphorelay system and signal transduction, 389, 396
Duplication
yeast evolution and comparative genomics, 135–39, 142, 144–45

E

EAP1 gene
Candida albicans growth on surfaces and, 118
Early immune evasion
Theiler's virus and, 281–85
EBML database
genome trees and, 204
EcoRI
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 176
Ectopic exchanges
yeast evolution and comparative genomics, 135
Effectors
Yersinia outer proteins and, 69, 71, 74, 77–78, 82–83
EFG1 gene
Candida albicans growth on surfaces and, 118, 120–25
EFH1 gene
Candida albicans growth on surfaces and, 121
eIF2 initiation factors
translational regulation of *GCN4* and amino acid control of yeast, 407–37
Elongation factor mimicry
diversity and evolution of protein translocation, 98
Embedded cells
Candida albicans growth on surfaces and, 120–23
Emergence
origins of new pandemic viruses and, 553, 559, 564, 566
vaccine-derived polioviruses and global polio eradication, 612–13
Encephalomyelitis
Theiler's virus and, 286
Encephalomyocarditis virus (EMCV)
Theiler's virus and, 282, 284
Endocytosis
Candida albicans growth on surfaces and, 125
Endonucleases
DNA replication and recombination interplay in prokaryotes, 48, 52–53
yeast evolution and comparative genomics, 144

Endopeptidases
FtsH protease and, 211–25
Endoplasmic reticulum (ER)
genome-wide responses to DNA-damaging agents and, 364
inner membrane protein biogenesis in *Escherichia coli* and, 332, 345
Endosymbiosis
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
signaling in arbuscular mycorrhizal symbiosis and, 19, 22, 25–31
Endothelial surfaces
Candida albicans growth on surfaces and, 119, 125, 127
End processing
DNA replication and recombination interplay in prokaryotes, 45, 48–49
Ends-apart recombination
DNA replication and recombination interplay in prokaryotes, 49–50
Enterobacter agglomerans
autofluorescent proteins for microbial ecology in situ studies and, 269
Enteroviruses
vaccine-derived polioviruses and global polio eradication, 589, 613–14
envA gene
FtsH protease and, 215
Envelope
nuclear
intracellular compartmentation in Planctomycetes and, 301–3, 309–11
EPA6 gene
Candida albicans growth on surfaces and, 118
Epidemics
origins of new pandemic viruses and, 553–78
Epidemiology
vaccine-derived polioviruses and global polio eradication, 591
Epidermal surfaces
Candida albicans growth on surfaces and, 119
Epithelial surfaces
Candida albicans growth on surfaces and, 115, 119, 127
Epitope spreading
Theiler's virus and, 285, 291
Erium globosum
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Erwinia spp.
Rcs phosphorelay system and signal transduction, 380, 384–85, 388
type IV secretion systems and, 468
Escherichia coli
Acinetobacter baylyi and, 524, 530–31, 534
autofluorescent proteins for microbial ecology in situ studies and, 260, 269
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 168, 171–73
Candida albicans growth on surfaces and, 126
diversity and evolution of protein translocation, 93–96, 98–101, 103
DNA replication and recombination interplay in prokaryotes, 45, 47–51, 54–55, 57–59
FtsH protease and, 213–18
genome trees and, 193, 196–97, 202
genome-wide responses to DNA-damaging agents and, 359–61
history of research, 1, 4–5, 10, 13
inner membrane proteins and, 329–46
intracellular compartmentation in Planctomycetes and, 303, 305, 309, 318
Rcs phosphorelay system and signal transduction, 380, 382–83, 385, 387–88, 390, 392–93, 395–97
riboswitches in regulation of gene expression and, 490, 492, 507–9
translational regulation of *GCN4* and amino acid control of yeast, 421
type IV secretion systems and, 454, 459, 464–65
Yersinia outer proteins and, 70, 83
EST1 gene
yeast evolution and comparative genomics, 146
Eukaryotes
diversity and evolution of protein translocation, 91–104
genome-wide responses to DNA-damaging agents and, 357–73
intracellular compartmentation in Planctomycetes and, 299–322
Eukaryotic signature protein (ESP)
intracellular compartmentation in Planctomycetes and, 319
Euplotidium spp.
intracellular compartmentation in Planctomycetes and, 317
Evolution
Acinetobacter baylyi and, 528–30
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
diversity of protein translocation and, 91–104

genome trees and, 191–206
intracellular compartmentation in Planctomycetes and, 299
origins of new pandemic viruses and, 553–78
riboswitches in regulation of gene expression and, 511
signaling in arbuscular mycorrhizal symbiosis and, 20, 26
yeast evolution and comparative genomics, 329–46
Yersinia outer proteins and, 71
Exopolysaccharides
Rcs phosphorelay system and signal transduction, 379
Expanded Program on Immunization (EPI)
vaccine-derived polioviruses and global polio eradication, 588–89
Experimental evolution
yeast evolution and comparative genomics, 135
Extensive antigenic variability
vaccine-derived polioviruses and global polio eradication, 614

F

fab genes
Candida albicans growth on surfaces and, 121
FtsH protease and, 215
Farnesol
Candida albicans growth on surfaces and, 116
Feline panleukopenia virus
origins of new pandemic viruses and, 555
Feline parvovirus
origins of new pandemic viruses and, 556, 561–65, 571–78
Fermentation
history of research, 4
yeast evolution and comparative genomics, 140–41, 145
Ferrisia gilli
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Ffh protein
inner membrane protein biogenesis in *Escherichia coli* and, 332–35
fhlA gene
riboswitches in regulation of gene expression and, 489
Filamentation
Candida albicans growth on surfaces and, 120–23, 125
Flagellin
signaling in arbuscular mycorrhizal symbiosis and, 29
Flavin mononucleotide (FMN)
riboswitches in regulation of gene expression and, 492, 494–95, 498–501, 506–7
Flavobacterium spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 171
Flavonoids
signaling in arbuscular mycorrhizal symbiosis and, 24
flhlDC operon
Rcs phosphorelay system and signal transduction, 388
Flowering plants
signaling in arbuscular mycorrhizal symbiosis and, 19–32
Fluorescence resonance energy transfer (FRET)
inner membrane protein biogenesis in *Escherichia coli* and, 337
Fluorescence timer
autofluorescent proteins for microbial ecology in situ studies and, 264
Fluorescent in situ hybridization (FISH)
intracellular compartmentation in Planctomycetes and, 311, 317
Fo *a* protein
FtsH protease and, 216–17
Focal adhesion kinase
Yersinia outer proteins and, 75
Folic acid
history of research, 5
Footprinting
yeast evolution and comparative genomics, 145–46
fts genes
DNA replication and recombination interplay in prokaryotes, 58
inner membrane protein biogenesis in *Escherichia coli* and, 333–35
Rcs phosphorelay system and signal transduction, 379, 389, 391, 395–96
FtsH protease
ATPase domain, 217–18
degradation initiation signals, 220
directionality of proteolysis, 221
discovery, 213–14
E. coli transcription factors, 215
Fo *a*, 216
FtsH holoenzyme, 219
functions, 224–25
general profile, 214

homo-hexamer, 218
introduction, 212
lipid A biosynthetic enzyme, 215–16
LpxC deacetylase, 215–16
membrane-embedded enzyme, 222–24
periplasmic domain, 219
protease domain, 219
proteolysis, 215–17, 219–20, 224–25
quality control, 217
reaction mechanisms, 219–24
rediscovery, 213–14
regulation, 219–24
SecY, 216
self-processing, 216
structure, 217–19
substrates, 215–17, 219–22
summary, 225
transmembrane region, 218
viability, 215–16
viral proteins, 215
YccA, 216
Fugu rubripes
genome trees and, 204
Fungi
Candida albicans growth on surfaces and, 113–27
mating and sexual cycle in *Candida albicans*, 233
signaling in arbuscular mycorrhizal symbiosis and, 19–32
translational regulation of *GCN4* and amino acid control of yeast, 425–26
yeast evolution and comparative genomics, 143
FUS3 gene
mating and sexual cycle in *Candida albicans*, 240, 246
Fusarium oxysporum
autofluorescent proteins for microbial ecology in situ studies and, 267
Fusobacterium spp.
genome trees and, 202

G

GAL genes
yeast evolution and comparative genomics, 145
β-Galactosidase
history of research, 8, 10
Galactosides
history of research, 1, 7–10
galF gene
Rcs phosphorelay system and signal transduction, 388
Gallus gallus
genome trees and, 204
γ-irradiation
genome-wide responses to DNA-damaging agents and, 361
Gangrene
history of research, 4
GAP1 gene
Candida albicans growth on surfaces and, 121
Gastrointestinal (GI) tract
Candida albicans growth on surfaces and, 113, 115, 126
GCN4 translational regulation
amino acid control of yeast and
abundance, 435
additional regulatory inputs, 424–25
conservation of function, 425–26
degradation, 435–36
eIF2, 415–17, 426–30
fungi, 425–26
Gcn2p-independent regulation, 433–35
Gcn2p kinase, 417–36
induction, 415–17
initiation factors, 430–33
insects, 425–26
mammals, 425–26
mRNA, 410–15, 435

phosphorylation, 415–17
recruitment, 426–30
recycling, 426–30
ribosomal proteins, 430–33
summary, 437
translational control, 415–17
uncharged tRNA, 417–36
unresolved issues, 436–37
uORFs, 410–15
gcvT gene
riboswitches in regulation of gene expression and, 504
Gemmata obscuriglobus
intracellular compartmentation in Planctomycetes and, 299, 305–6, 308, 309–12, 318–22
GenBank database
genome trees and, 204
Gender effect
Theiler's virus and, 288–89
Gene annotation
yeast evolution and comparative genomics, 142–43
Gene arrays

autofluorescent proteins for microbial ecology
in situ studies and, 258
Gene clusters
Acinetobacter baylyi and, 519, 523–25
Gene content trees
genome trees and, 191, 195–97
Gene expression
riboswitches in regulation of gene expression and, 487–511
Genetic engineering
riboswitches in regulation of gene expression and, 509–10
Genetic islands
Acinetobacter baylyi and, 519, 525, 539
Genome trees
nature of genome evolution and
alignment-free genome trees, 194–95
average sequence similarity, 198–99
computation, 203–5
concatenated sequences, 199–202
conclusions, 203–6
construction approaches, 193–94
data, 203–5
filtering for inconsistent signals, 201
gene order, 197–98
gene trees, 199–201
horizontal gene transfer, 202–3
introduction, 192–94
modeling genome evolution, 201–2
phylogenetics, 202
phylogeny, 192–94, 199–201, 205
shared gene content, 195–97
summary, 205
supertrees, 199–201
taxonomy, 202
Genomics
Acinetobacter baylyi and, 519–39
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
diversity and evolution of protein translocation, 103–4
DNA replication and recombination interplay in prokaryotes, 43–60
genome-wide responses to DNA-damaging agents and, 357–73
history of research, 13
intracellular compartmentation in Planctomycetes and, 305, 312, 316, 318–19
riboswitches in regulation of gene expression and, 488
signaling in arbuscular mycorrhizal symbiosis and, 21, 25
Theiler's virus and, 281
yeast evolution and comparative genomics, 329–46
Germination
signaling in arbuscular mycorrhizal symbiosis and, 22–23
gfp genes
autofluorescent proteins for microbial ecology in situ studies and, 259–60
Gigaspora spp.
signaling in arbuscular mycorrhizal symbiosis and, 21, 23, 25
Glial cells
Theiler's virus and, 279–80, 285–86, 291
glmS gene
riboswitches in regulation of gene expression and, 495, 503–4, 508–9
Global yeast phylogeny
yeast evolution and comparative genomics, 146–47
Glomus spp.
signaling in arbuscular mycorrhizal symbiosis and, 21, 23–24, 28, 30
Glossina brevipalpis
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Glucosamine-6-phosphate (GlcN6P)
riboswitches in regulation of gene expression and, 493–95, 501, 503, 508
Glucose
Acinetobacter baylyi and, 534–36
Glutathione-*S*-transferase
signaling in arbuscular mycorrhizal symbiosis and, 28
Glycaspis brimblecombei
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 163
Glycine riboswitch
riboswitches in regulation of gene expression and, 495, 503
GPA genes
Candida albicans growth on surfaces and, 121, 123–24
mating and sexual cycle in *Candida albicans*, 247
GPR1 gene
Candida albicans growth on surfaces and, 121, 123–24
G proteins
Yersinia outer proteins and, 76–80
Gram-negative bacteria
history of research, 4

inner membrane protein biogenesis in *Escherichia coli* and, 329–46
type IV secretion systems and, 451–75
Yersinia outer proteins and, 70
Gram-positive bacteria
diversity and evolution of protein translocation, 101
DNA replication and recombination interplay in prokaryotes, 59
genome trees and, 202, 205
history of research, 4
type IV secretion systems and, 451–75
Green fluorescent protein (GFP)
autofluorescent proteins for microbial ecology in situ studies and, 257, 259–71
diversity and evolution of protein translocation, 101
genome-wide responses to DNA-damaging agents and, 369
inner membrane protein biogenesis in *Escherichia coli* and, 345
Rcs phosphorelay system and signal transduction, 397
signaling in arbuscular mycorrhizal symbiosis and, 28
gro genes
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 174
Gross chromosomal rearrangement
yeast evolution and comparative genomics, 137–38, 140–42, 146–47
GTPase–activating/accelerating proteins (GAPs)
Yersinia outer proteins and, 78–79
GTP cycle
inner membrane protein biogenesis in *Escherichia coli* and, 334–35
Guanine nucleotide dissociation inhibitors (GDIs)
Yersinia outer proteins and, 78
Guanine nucleotide exchange factors (GEFs)
Yersinia outer proteins and, 75
Guanine riboswitch
riboswitches in regulation of gene expression and, 494, 499–500
gusA reporter
autofluorescent proteins for microbial ecology in situ studies and, 271
signaling in arbuscular mycorrhizal symbiosis and, 24–25

H

H2 class I genes
Theiler's virus and, 279, 287–88, 292
Haemophilus spp.
genome trees and, 197
history of research, 6
Haloarcula marismortui
diversity and evolution of protein translocation, 103
inner membrane protein biogenesis in *Escherichia coli* and, 336, 338–39
Halo assay
mating and sexual cycle in *Candida albicans*, 244
Haloferax volcanii
diversity and evolution of protein translocation, 96–98, 101–2
Haploidy
DNA replication and recombination interplay in prokaryotes, 50
mating and sexual cycle in *Candida albicans*, 235
HBR1 gene
mating and sexual cycle in *Candida albicans*, 243–44
hca genes
Acinetobacter baylyi and, 523–26, 528
HcRed
autofluorescent proteins for microbial ecology in situ studies and, 264
α-Helical proteins
inner membrane protein biogenesis in *Escherichia coli* and, 329–46
Helicases
DNA replication and recombination interplay in prokaryotes, 45, 47, 49, 53–54
Helicobacter pylori
type IV secretion systems and, 453–55, 459–62, 467
Hemagglutinin
origins of new pandemic viruses and, 553, 555–56
Hemoglobin
mating and sexual cycle in *Candida albicans*, 242–44
Heterologous genes
Acinetobacter baylyi and, 519, 534, 539
HflKC membrane protein complex
FtsH protease and, 211, 213, 215, 219, 222–25
High pathogenicity island
Yersinia outer proteins and, 71
High-throughput methods
genome-wide responses to DNA-damaging agents and, 372–73
Histidine kinase
Candida albicans growth on surfaces and, 116

Rcs phosphorelay system and signal transduction, 379, 382
HO endonuclease
yeast evolution and comparative genomics, 144
HO genes
mating and sexual cycle in *Candida albicans*, 242, 250
HOG1 gene
Candida albicans growth on surfaces and, 121, 124
holD gene
DNA replication and recombination interplay in prokaryotes, 51
Holliday junctions
DNA replication and recombination interplay in prokaryotes, 45–46, 52, 57
Holoenzymes
FtsH protease and, 219
Homalodisca coagulata
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 170–71
Homo-hexamer
FtsH protease and, 218
Homologous recombination
DNA replication and recombination interplay in prokaryotes, 43–60
Homoserine dehydrogenases
history of research, 11–12
HOP1 gene
mating and sexual cycle in *Candida albicans*, 249
Horizontal gene transfer
Acinetobacter baylyi and, 519
autofluorescent proteins for microbial ecology in situ studies and, 257, 266, 270–71
genome trees and, 191, 195, 199, 201–3, 205
intracellular compartmentation in Planctomycetes and, 319, 322
yeast evolution and comparative genomics, 137–38, 145
Host factors
mating and sexual cycle in *Candida albicans*, 242–44
Host ranges
origins of new pandemic viruses and, 553–78, 555
Host transfer
origins of new pandemic viruses and, 553–78
HST7 gene
Candida albicans growth on surfaces and, 121, 124
mating and sexual cycle in *Candida albicans*, 246–47
Human immunodeficiency virus (HIV)
Candida albicans growth on surfaces and, 115
mating and sexual cycle in *Candida albicans*, 234
origins of new pandemic viruses and, 554
HWP1 gene
mating and sexual cycle in *Candida albicans*, 245
Hybrid yeast
yeast evolution and comparative genomics, 135, 140
Hydrophobic membranes
diversity and evolution of protein translocation, 91–104
Hyphae
Candida albicans growth on surfaces and, 113, 116, 118–19, 125–27
signaling in arbuscular mycorrhizal symbiosis and, 22–25, 29

I

IκB kinase
Yersinia outer proteins and, 80–81
Ifngr gene
Theiler's virus and, 290–91
igaA gene
Rcs phosphorelay system and signal transduction, 390–92, 398
Ignicoccus islandicus
intracellular compartmentation in Planctomycetes and, 317
Immune response
mating and sexual cycle in *Candida albicans*, 251
Theiler's virus and, 279–92
Yersinia outer proteins and, 69–70, 73–75, 77–78, 82, 84–85
Immunodeficiency-associated VAPP (iVAPP)
vaccine-derived polioviruses and global polio eradication, 604
Immunodeficient VDPVs (iVDPVs)
vaccine-derived polioviruses and global polio eradication, 604–7, 613–16, 622
Implanted medical devices
Candida albicans growth on surfaces and, 115–16
Inactivated poliovirus vaccine (IPV)
vaccine-derived polioviruses and global polio eradication, 588, 591–92, 597, 619
Incomplete genomes
genome trees and, 204
Inconsistent signals
genome trees and, 201
Indel mutations

Acinetobacter baylyi and, 522
Inducible stable DNA replication (iSDR)
DNA replication and recombination interplay in prokaryotes, 47
Induction
Rcs phosphorelay system and signal transduction, 379, 393–95
translational regulation of *GCN4* and amino acid control of yeast, 415–17
infA gene
diversity and evolution of protein translocation, 103
Infection
Candida albicans growth on surfaces and, 115–16
origins of new pandemic viruses and, 553–78
Theiler's virus and, 279–92
Influenza A virus
origins of new pandemic viruses and, 553, 556–57, 575, 577
Inhibition
Theiler's virus and, 282–83
Initiation factors
translational regulation of *GCN4* and amino acid control of yeast, 407–37
Initiation signals
FtsH protease and, 220
Injectisome
Yersinia outer proteins and, 71
Innate immunity
Theiler's virus and, 281, 290
Yersinia outer proteins and, 69, 73–75, 77–78, 82, 84–85
Inner membrane proteins (IMPS)
biogenesis in *Escherichia coli*
assembly of IMPS in membrane, 339–46
cellular location of biogenesis, 345–46
conclusions, 346
diversity, 333–34
Ffh, 334–35
FtsY, 333–35
GTP cycle, 334–35
introduction, 330–31
L23 at exit site, 338–39
perspectives, 346
polypeptide exit tunnel, 336–39
protein targeting, 331–35
ribosome, 335–39
ribosome-Sec-translocon junction, 340–41
Sec-translocon, 339–43
SRP, 332–35
transmembrane helices, 344–45
transmembrane segments, 337–38
YidC, 343–44
Insects
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
translational regulation of *GCN4* and amino acid control of yeast, 425–26
Insertion sequences
Acinetobacter baylyi and, 530–31, 539
Institut Pasteur
history of research, 1, 4–14
Integrins
Yersinia outer proteins and, 72, 75–76, 80, 84
Interactome
genome-wide responses to DNA-damaging agents and, 371
Interferon (IFN)
Theiler's virus and, 279, 281–85, 290–91
Interferon-γ (IFN-γ)
Yersinia outer proteins and, 73–74
Interferon regulatory factor-3 (IRF-3)
Theiler's virus and, 282–83
Interhost transmission
origins of new pandemic viruses and, 566–75
Interleukins (ILs)
Yersinia outer proteins and, 73, 78, 83
Internal ribosome entry site (IRES)
Theiler's virus and, 281, 284–85
vaccine-derived polioviruses and global polio eradication, 590, 596
International Cell Research Organization (ICRO)
history of research, 13
Intracellular compartmentation
in Planctomycetes
anaerobic ammonium-oxidizing chemolithoautotrophic planctomycetes, 312–16
anammoxosome, 312–16
cell plan, 312–19
compartments of eukaryotic cell, 300–1
conclusions, 321
eukaryotic nucleus/envelope, 301–3
Gemma obscuriglobus, 308–12
genomics, 318–19
introduction, 300
last universal common ancestor, 319–21
molecular cell biology, 311–12, 317
nuclear body, 311–12
nucleated prokaryote, 308–12
phylogenetics, 304–5
phylum members, 304–5
prokaryote-eukaryote dichotomy, 300–1

prokaryotic cell plan, 303–12
summary, 321–22
Intracytoplasmic membrane
intracellular compartmentation in Planctomycetes and, 304–15, 319, 322
Invasins
Yersinia outer proteins and, 71–72, 75, 83–84
Invasive growth
Candida albicans growth on surfaces and, 113, 115, 119–25, 127
Inversion
yeast evolution and comparative genomics, 137–38, 141–42
IS*1236*
Acinetobacter baylyi and, 530–31, 539
Isoflavone reductase
signaling in arbuscular mycorrhizal symbiosis and, 30
Isofunctional enzymes
history of research, 5–10
Isopropylthiogalactoside (IPTG)
Acinetobacter baylyi and, 530
Isosphaera spp.
intracellular compartmentation in Planctomycetes and, 304–8

J

Jaspis stellifera
intracellular compartmentation in Planctomycetes and, 316–17

K

Karyogamy
mating and sexual cycle in *Candida albicans*, 247
katE gene
Rcs phosphorelay system and signal transduction, 389, 395
KEX2 gene
mating and sexual cycle in *Candida albicans*, 244
Kinases
Acinetobacter baylyi and, 534–36
Candida albicans growth on surfaces and, 116
Rcs phosphorelay system and signal transduction, 379–99
translational regulation of *GCN4* and amino acid control of yeast, 417–36
Yersinia outer proteins and, 75–76, 79–80, 83
Klebsiella spp.
Rcs phosphorelay system and signal transduction, 380, 385–86, 388
Kluyveromyces spp.
mating and sexual cycle in *Candida albicans*, 234–36, 242
yeast evolution and comparative genomics, 137, 142–44, 146
Kr-Ar ion laser
autofluorescent proteins for microbial ecology in situ studies and, 264–65
KSS1 gene
mating and sexual cycle in *Candida albicans*, 246–47
Kuenenia stuttgartiensis
intracellular compartmentation in Planctomycetes and, 304, 308, 312, 318
Ku gene
yeast evolution and comparative genomics, 146

L

L15 gene
diversity and evolution of protein translocation, 103
L23 docking site
inner membrane protein biogenesis in *Escherichia coli* and, 338–39
lac reporter
genome-wide responses to DNA-damaging agents and, 359
Rcs phosphorelay system and signal transduction, 381
riboswitches in regulation of gene expression and, 509
Lactate dehydrogenase
Yersinia outer proteins and, 82
Lactococcus lactis
yeast evolution and comparative genomics, 145
lacZ reporter
autofluorescent proteins for microbial ecology in situ studies and, 271
Rcs phosphorelay system and signal transduction, 384, 391, 393
riboswitches in regulation of gene expression and, 503, 506, 508
Ladderane
intracellular compartmentation in Planctomycetes and, 299, 313, 315
Lagging-strand damage
DNA replication and recombination interplay in prokaryotes, 53, 56
Lanosterol
intracellular compartmentation in Planctomycetes and, 311
Last universal common ancestor

intracellular compartmentation in Planctomycetes and, 319–21
Lateral root formation
signaling in arbuscular mycorrhizal symbiosis and, 30–31
Lateral transport
diversity and evolution of protein translocation, 91–104
LcrV protein
Yersinia outer proteins and, 74, 84
LD50
Yersinia outer proteins and, 77, 79, 82
Legionella pneumophila
type IV secretion systems and, 453–55, 460, 466–67, 469
Legumes
signaling in arbuscular mycorrhizal symbiosis and, 19, 22, 25–27, 31
Yersinia outer proteins and, 70
leuA gene
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 170
Leucine-rich protein
Yersinia outer proteins and, 81–82
lexA gene
genome-wide responses to DNA-damaging agents and, 360–61
Lipid A biosynthetic enzyme
FtsH protease and, 215–16
Lipids
diversity and evolution of protein translocation, 91–104
intracellular compartmentation in Planctomycetes and, 299
Theiler's virus and, 291
Lipopolysaccharide (LPS)
FtsH protease and, 215
Liposomes
Yersinia outer proteins and, 74
Liquid growth
Candida albicans growth on surfaces and, 113–14
Listeria monocytogenes
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
riboswitches in regulation of gene expression and, 492
LjSYM genes
signaling in arbuscular mycorrhizal symbiosis and, 26–28
Load strand-invasion protein
DNA replication and recombination interplay in prokaryotes, 45
lolA gene
Rcs phosphorelay system and signal transduction, 392
lon genes
Rcs phosphorelay system and signal transduction, 380–81, 393
Lon protease
Rcs phosphorelay system and signal transduction, 379, 383
Long–term colonization
Yersinia outer proteins and, 85
Lotus japonicus
signaling in arbuscular mycorrhizal symbiosis and, 26–28
L protein
Theiler's virus and, 279, 281–85, 290, 292
lpxC gene
FtsH protease and, 215–16
lrt1 gene
signaling in arbuscular mycorrhizal symbiosis and, 30–31
LSM1 gene
genome-wide responses to DNA-damaging agents and, 365
Lux genes
autofluorescent proteins for microbial ecology in situ studies and, 271
Rcs phosphorelay system and signal transduction, 379
LYK3 gene
signaling in arbuscular mycorrhizal symbiosis and, 26–27
Lymphoid tissues
Yersinia outer proteins and, 69–85
lysC gene
riboswitches in regulation of gene expression and, 502
Lysine riboswitch
riboswitches in regulation of gene expression and, 495, 502–3
Lysogenation
FtsH protease and, 213

M

Maconellicoccus hirsutus
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 169
Macrophages
Theiler's virus and, 279–81, 284–86, 290–91

MAG1 gene
genome-wide responses to DNA-damaging agents and, 361, 363
Magnoporthe grisea
Candida albicans growth on surfaces and, 125
signaling in arbuscular mycorrhizal symbiosis and, 25
Mammalian hosts
Candida albicans growth on surfaces and, 113–27
genome-wide responses to DNA-damaging agents and, 364–65
mating and sexual cycle in *Candida albicans*, 233–51
translational regulation of *GCN4* and amino acid control of yeast, 425–26
map genes
diversity and evolution of protein translocation, 103
MAPK genes
Candida albicans growth on surfaces and, 124
Mapping mutations
Acinetobacter baylyi and, 531
Markers
autofluorescent proteins for microbial ecology in situ studies and, 257–71
Theiler's virus and, 292
MAT genes
mating and sexual cycle in *Candida albicans*, 235–36, 241, 250
MCM1 gene
Candida albicans growth on surfaces and, 121
mdo genes
inner membrane protein biogenesis in *Escherichia coli* and, 332, 335
Rcs phosphorelay system and signal transduction, 392–93
MDR1 gene
Candida albicans growth on surfaces and, 117
Mealybugs
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155, 168–70
Mechanosensitivity
Candida albicans growth on surfaces and, 126
Medicago trunculata
signaling in arbuscular mycorrhizal symbiosis and, 21, 24, 26–30
Meiosis
mating and sexual cycle in *Candida albicans*, 233, 249–51
Melaphis rhois
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Membrane proteins
FtsH protease and, 211–25
Meropolyploidy
yeast evolution and comparative genomics, 142
Mesenteric lymph nodes
Yersinia outer proteins and, 72–73
Mesorhizobium meliloti
type IV secretion systems and, 465–66
Metabolic sensing
riboswitches in regulation of gene expression and, 487, 490–509
Metabolism
Acinetobacter baylyi and, 519–20, 522, 525, 538
autofluorescent proteins for microbial ecology in situ studies and, 269, 271
intracellular compartmentation in Planctomycetes and, 304–5
yeast evolution and comparative genomics, 145
Metabolomics
autofluorescent proteins for microbial ecology in situ studies and, 258
Metagenomics
genome trees and, 203–4
met genes
history of research, 12
Methanocaldococcus jannaschii
diversity and evolution of protein translocation, 95
Methanococcus jannaschii
inner membrane protein biogenesis in *Escherichia coli* and, 341
Methanosarcinales spp.
intracellular compartmentation in Planctomycetes and, 320
Methanothermobacter thermoautotrophicus
genome trees and, 196
Methionine repressor
history of research, 1, 5, 11–14
MFα gene
mating and sexual cycle in *Candida albicans*, 244
Microbe-plant interactions
autofluorescent proteins for microbial ecology in situ studies and, 257, 266–68
Microbial ecology
autofluorescent proteins for in situ studies and, 257–71
Mismatch repair
yeast evolution and comparative genomics, 140
Mitogen-activated protein kinases (MAPKs)

Candida albicans growth on surfaces and, 122, 124
mating and sexual cycle in *Candida albicans*, 244, 247
Yersinia outer proteins and, 76, 80–81, 83
Mitomycin C
DNA replication and recombination interplay in prokaryotes, 53
genome-wide responses to DNA-damaging agents and, 361
MMS
genome-wide responses to DNA-damaging agents and, 360–63, 365–67, 369–71
MNNG
genome-wide responses to DNA-damaging agents and, 361–62
Molecular engineering
riboswitches in regulation of gene expression and, 509–10
Monod J, 1, 3–10, 14
Monomeric red fluorescent protein (mRFP)
autofluorescent proteins for microbial ecology in situ studies and, 263
Moraxella spp.
autofluorescent proteins for microbial ecology in situ studies and, 269
Mpf subunit structures
type IV secretion systems and, 456–60
M protein
origins of new pandemic viruses and, 557
mRNA
riboswitches in regulation of gene expression and, 491–92, 508–9
translational regulation of *GCN4* and amino acid control of yeast, 410–15, 435
mrsC gene
FtsH protease and, 214
MtENOD11 gene
signaling in arbuscular mycorrhizal symbiosis and, 24, 27
MTL genes
mating and sexual cycle in *Candida albicans*, 235–38, 243–44
Multifunctional proteins
history of research, 10–11
Multigenic susceptibility
Theiler's virus and, 279
Multiple sclerosis
Theiler's virus and, 279–80, 291–92
MUSCLE program
genome trees and, 201, 204
mutS gene
Acinetobacter baylyi and, 522, 532
Mutualism
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 156–57
signaling in arbuscular mycorrhizal symbiosis and, 19–32
Myc factor
signaling in arbuscular mycorrhizal symbiosis and, 24
Mycoplasma genitalium
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
genome trees and, 196
Mycorrhiza
signaling in arbuscular mycorrhizal symbiosis and, 19–32
Myelin
Theiler's virus and, 279–80
Myelin basic protein
Theiler's virus and, 286

N

N-acetyl neuraminic acid (NeuAc)
origins of new pandemic viruses and, 567, 574
N-acyl homoserine lactone (N-AHL)
autofluorescent proteins for microbial ecology in situ studies and, 268
Nanoarchaeum equitans
genome trees and, 196
National Immunization Days (NIDs)
vaccine-derived polioviruses and global polio eradication, 597
Natural killer (NK) cells
Yersinia outer proteins and, 73, 82, 84
Natural transformation
Acinetobacter baylyi and, 519–39
ND1 gene
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 159–60
Neisseria spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
inner membrane protein biogenesis in *Escherichia coli* and, 334
NEJ1 gene
mating and sexual cycle in *Candida albicans*, 241
Neomaskellia andropogonis
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158, 160
Networks
genome-wide responses to DNA-damaging agents and, 357, 359, 368–70

Neuraminidase
origins of new pandemic viruses and, 553, 555–57
Neurons
Theiler's virus and, 279–80, 285–86
Neurospora spp.
mating and sexual cycle in *Candida albicans*, 235
translational regulation of *GCN4* and amino acid control of yeast, 408
Neurovirulence
vaccine-derived polioviruses and global polio eradication, 587, 593–96
NF-κB
Yersinia outer proteins and, 76, 80–81
nfr genes
signaling in arbuscular mycorrhizal symbiosis and, 26–27
Niche specialization
yeast evolution and comparative genomics, 145
Nicks
DNA replication and recombination interplay in prokaryotes, 52
Nipah virus
origins of new pandemic viruses and, 578
Nitrogen fixation
signaling in arbuscular mycorrhizal symbiosis and, 22, 28, 31
Nitrosomonas europa
intracellular compartmentation in Planctomycetes and, 315
nlpE gene
Rcs phosphorelay system and signal transduction, 391
Nod factor
signaling in arbuscular mycorrhizal symbiosis and, 22, 26
Nonautonomous signaling
signaling in arbuscular mycorrhizal symbiosis and, 27–29
Non-*H2* susceptibility loci
Theiler's virus and, 279, 287–89, 292
Non-reciprocal translocation
yeast evolution and comparative genomics, 138
Nonstructural small segment
Theiler's virus and, 283
Nostocoida limicola
intracellular compartmentation in Planctomycetes and, 307–8
NOT4 gene
Candida albicans growth on surfaces and, 118
4NQO
genome-wide responses to DNA-damaging agents and, 361–62, 365–66, 369, 371
NS genes
origins of new pandemic viruses and, 557, 564
Nuclear body
intracellular compartmentation in Planctomycetes and, 301–3, 305–6, 308–12, 316
Nuclear pore complex
intracellular compartmentation in Planctomycetes and, 301–3, 312
Nucleases
DNA replication and recombination interplay in prokaryotes, 52
Nucleoid
intracellular compartmentation in Planctomycetes and, 299, 305–6, 308–10, 314–15
nusG gene
diversity and evolution of protein translocation, 103
Nutritional versatility
Acinetobacter baylyi and, 519–39

O

OBP genes
mating and sexual cycle in *Candida albicans*, 236, 251
Oligodendrocytes
Theiler's virus and, 279–80, 285–86, 290–91
Oligonucleotide recombination
DNA replication and recombination interplay in prokaryotes, 55
ompG gene
Rcs phosphorelay system and signal transduction, 392
Oncorhynchus spp.
yeast evolution and comparative genomics, 137
One gene-one enzyme concept
history of research, 6
Open reading frames (ORFs)
Theiler's virus and, 279, 281, 284–85
translational regulation of *GCN4* and amino acid control of yeast, 410–15
vaccine-derived polioviruses and global polio eradication, 589–90
yeast evolution and comparative genomics, 139, 142–43
Oral poliovirus vaccine (OPV)
vaccine-derived polioviruses and global polio eradication, 587, 592–98, 603–4, 606–23

Oral thrush
Candida albicans growth on surfaces and, 113, 126
ori genes
DNA replication and recombination interplay in prokaryotes, 45, 47, 49
type IV secretion systems and, 469
Orphan riboswitch candidates
riboswitches in regulation of gene expression and, 503–4
Orthologs
Acinetobacter baylyi and, 527
comparative genomics and, 144
genome trees and, 203, 205
Oryza sativa
yeast evolution and comparative genomics, 137
osm genes
Rcs phosphorelay system and signal transduction, 379, 385–86, 389, 394–95
Oxa1 protein
diversity and evolution of protein translocation, 91–104

P

pabA gene
riboswitches in regulation of gene expression and, 507
Pachypsylla venusta
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 164
Pairing element
riboswitches in regulation of gene expression and, 502
pal genes
Rcs phosphorelay system and signal transduction, 393
Pan American Health Organization (PAHO)
vaccine-derived polioviruses and global polio eradication, 597
Pandemic viruses
origins of new
acquisition of new viral host ranges, 555–56
adaptation, 567
avian influenza A virus, 556–70
canine parvovirus, 561–63, 571–74
conclusions, 575–78
discussion, 575–78
emergence, 557–60
feline parvovirus, 561–63, 571–74
frequency of host range jumps, 575–78
host ranges, 555–56, 566–78
host-specific effects of influenza proteins, 570–71
human influenza A virus, 557–60, 567
interhost transmission, 566–75
internal proteins, 570–71
introduction, 554–56
mammalian influenza A virus, 556–57
molecular controls, 566–75
natural histories, 556–61
recent pandemics, 556–61
replication proteins, 570–71
sialic acid, 567–68, 570
special set of events for viral host range changes, 575–77
timing of successful transfers, 575, 577–78
Pantoea stewartii
Rcs phosphorelay system and signal transduction, 380, 384, 388, 396, 398
type IV secretion systems and, 468
PAP genes
mating and sexual cycle in *Candida albicans*, 236, 251
Paracoccus nothofagicola
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Paralogs
genome trees and, 191, 203
yeast evolution and comparative genomics, 137–39
Paramecium spp.
history of research, 7
Parasexual cycle
mating and sexual cycle in *Candida albicans*, 233, 235, 249–50
Parasitism
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 156
signaling in arbuscular mycorrhizal symbiosis and, 19, 22
Paris-type arbuscular mycorrhizal symbiosis
signaling in arbuscular mycorrhizal symbiosis and, 22
Partially conserved cotranslational pathway
inner membrane protein biogenesis in *Escherichia coli* and, 329–30
Parvoviruses
origins of new pandemic viruses and, 553–56, 561–67, 571–75, 577–78
Paryphoplasm
intracellular compartmentation in Planctomycetes and, 305–10, 314–15
Pathogen-associated molecular patterns (PAMPs)

signaling in arbuscular mycorrhizal symbiosis and, 29–30
Pathogenesis
Candida albicans growth on surfaces and, 113–27
vaccine-derived polioviruses and global polio eradication, 590–91
Yersinia outer proteins and, 69–85
Pathogenicity islands
Acinetobacter baylyi and, 519, 527
Yersinia outer proteins and, 71–72
Paxillin
Yersinia outer proteins and, 75
pbuX gene
riboswitches in regulation of gene expression and, 499–500
pca genes
Acinetobacter baylyi and, 523, 525–33, 539
PCR–RFLP
autofluorescent proteins for microbial ecology in situ studies and, 258–59
Pepstatin
Candida albicans growth on surfaces and, 119
Periplasmic domain
FtsH protease and, 219
Periplasmic outer membrane
type IV secretion systems and, 472–73
Permeases
history of research, 1, 5–10
Persistence
Theiler's virus and, 279–92
Person-to-person transmission
vaccine-derived polioviruses and global polio eradication, 614–15
Peyer's patches
Yersinia outer proteins and, 72–73
pgi genes
Rcs phosphorelay system and signal transduction, 392–93
pgsA gene
Rcs phosphorelay system and signal transduction, 392
Phagocytosis
Theiler's virus and, 292
Yersinia outer proteins and, 69, 73–76, 78–80, 84–85
Phenotypic profiling
genome-wide responses to DNA-damaging agents and, 357, 365–66, 373
Phenotypic switching
mating and sexual cycle in *Candida albicans*, 233–34
Pheromones
mating and sexual cycle in *Candida albicans*, 233, 244–47
Phosphate
signaling in arbuscular mycorrhizal symbiosis and, 19–32
Phospholipases
Candida albicans growth on surfaces and, 119–20
Phosphorylation
signaling in arbuscular mycorrhizal symbiosis and, 26
translational regulation of *GCN4* and amino acid control of yeast, 415–17
PHYLIP program
genome trees and, 201
Phylloxera spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Phylogenetic footprinting
yeast evolution and comparative genomics, 145–46
Phylogenetic trees
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 156, 158, 160, 164, 166–67, 169–71
Phylogenomics
genome trees and, 191–206
Phylogeny
intracellular compartmentation in Planctomycetes and, 304–5
origins of new pandemic viruses and, 564–65, 577
PHYML program
genome trees and, 201, 204
Picornaviruses
Theiler's virus and, 279–92
vaccine-derived polioviruses and global polio eradication, 589
PIK genes
mating and sexual cycle in *Candida albicans*, 236, 251
Pilus-associated proteins
type IV secretion systems and, 461–63
Pirellula spp.
intracellular compartmentation in Planctomycetes and, 304–8, 312, 318
Planctomycetes
intracellular compartmentation in, 299–322
Planococcus spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 169

Plants
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
Plasma membrane
diversity and evolution of protein translocation, 103
Yersinia outer proteins and, 69–85
Plasmids
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 176–77
Yersinia outer proteins and, 69–71
PLD1 gene
Candida albicans growth on surfaces and, 121
Plectridium tetani
history of research, 4
Pleiotropy
history of research, 8
pmi genes
signaling in arbuscular mycorrhizal symbiosis and, 24
Pneumococci
history of research, 7
pob genes
Acinetobacter baylyi and, 523–26, 528, 531, 533–34
Poliomyelitis
vaccine-derived polioviruses and global polio eradication, 587, 590–91, 603–4
Polioviruses
vaccine-derived polioviruses and global polio eradication, 587–623
Polymerase chain reaction (PCR)
mutagenic
Acinetobacter baylyi and, 519, 531–34, 537, 539
Polypeptide exit tunnel
inner membrane protein biogenesis in *Escherichia coli* and, 336–39
Polyploidy
yeast evolution and comparative genomics, 137
Polypyrimidine tract-binding protein
vaccine-derived polioviruses and global polio eradication, 595
Population genomics
yeast evolution and comparative genomics, 135, 146–47
Pores
diversity and evolution of protein translocation, 94–97
FtsH protease and, 213, 222
Yersinia outer proteins and, 74, 76, 82–84
Poribacteria spp.
intracellular compartmentation in Planctomycetes and, 317, 319, 322
Portiera spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155, 160–62, 164–67, 173, 179
Postzygotic barriers
yeast evolution and comparative genomics, 140
Potentilla anserina
mating and sexual cycle in *Candida albicans*, 235
Presymbiotic growth phase
signaling in arbuscular mycorrhizal symbiosis and, 23
Prezygotic barriers
yeast evolution and comparative genomics, 140
Primases
DNA replication and recombination interplay in prokaryotes, 45, 49
Primosomes
DNA replication and recombination interplay in prokaryotes, 54
Pri proteins
DNA replication and recombination interplay in prokaryotes, 47, 49, 57
Prokaryotes
diversity and evolution of protein translocation, 91–104
DNA replication and recombination interplay in, 43–60
intracellular compartmentation in Planctomycetes and, 299–322
yeast evolution and comparative genomics, 145
Promoters
Rcs phosphorelay system and signal transduction, 386
Prosthecobacter dejongeii
intracellular compartmentation in Planctomycetes and, 317–19
Proteases
Candida albicans growth on surfaces and, 119–20
diversity and evolution of protein translocation, 103
FtsH protease and, 211–25
Rcs phosphorelay system and signal transduction, 379, 383
Theiler's virus and, 281
Yersinia outer proteins and, 80
Proteasomes
Yersinia outer proteins and, 80
Protein crystallography
history of research, 1

Protein kinase C-like protein 2 (PRK2)
Yersinia outer proteins and, 81
Protein tyrosine phosphatases
Yersinia outer proteins and, 75–77
"Protein world"
diversity and evolution of protein translocation, 103
Proteobacteria spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 170
Proteolipid protein
Theiler's virus and, 286, 291
Proteolysis
FtsH protease and, 215–17, 220, 224–25
Proteus mirabilis
Rcs phosphorelay system and signal transduction, 380, 388, 390, 392
Protocatechuate
Acinetobacter baylyi and, 523–26, 528–29
Proton-motive force
FtsH protease and, 224
type IV secretion systems and, 464
prs genes
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 170
Pseudogenes
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 174–76
yeast evolution and comparative genomics, 139
Candida albicans growth on surfaces and, 117
Pseudomonas spp.
Acinetobacter baylyi and, 520–21, 535, 538
autofluorescent proteins for microbial ecology in situ studies and, 266–70
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 167
Psyllids
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155, 162–63
Puccinia hordei
Candida albicans growth on surfaces and, 125
Purine aptamer
riboswitches in regulation of gene expression and, 494–95
Pyrococcus abyssi
diversity and evolution of protein translocation, 103
history of research, 13
Pyrroquinoline quinine
Acinetobacter baylyi and, 535, 537
Pyruvate kinase
Acinetobacter baylyi and, 534–36

Q

Quality control
FtsH protease and, 211, 213, 217
inner membrane protein biogenesis in *Escherichia coli* and, 330–31
Quantitative trait loci (QTL)
Theiler's virus and, 287
qui genes
Acinetobacter baylyi and, 523–26, 528
Quinate catabolism
Acinetobacter baylyi and, 535, 537
Quorum sensing
Candida albicans growth on surfaces and, 126

R

rIIB gene
DNA replication and recombination interplay in prokaryotes, 49
RAM2 gene
mating and sexual cycle in *Candida albicans*, 241
RANTES genes
Theiler's virus and, 283
RAS genes
Candida albicans growth on surfaces and, 121–24
Rate of sequence of change
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 171–73
RBR1 gene
Candida albicans growth on surfaces and, 121
Rcs phosphorelay system
signal transduction and
auxiliary proteins, 384–87
biofilm formation, 390
capsule genes, 387–88
cell surface perturbations, 393–94
conclusions, 397–98
future research, 397–99
history of studies, 380–81
IgaA, 391–92
induction, 393–95
introduction, 380
phosphorelay cascade, 381–84
phosphorelay levels, 397
RcsA, 385–86, 388, 395–97
RcsA-independent targets, 389
RcsB, 384–85, 388
RcsF, 391–92
Rcs regulon, 380–81, 387–95
regulation, 386–87, 390–92, 394–97
repression, 388

roles, 387–90
signaling, 381–87, 394–97
summary, 398
surfaces, 393–95
targets, 387–90
treatments, 394
rDNA
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 156–62, 164–68, 170–72, 177, 179
Rearrangement
yeast evolution and comparative genomics, 135, 137–38, 140–42, 146–47
Reassortment
origins of new pandemic viruses and, 555
rec genes
DNA replication and recombination interplay in prokaryotes, 48–49, 53, 55, 57
genome trees and, 197
genome-wide responses to DNA-damaging agents and, 360
Recipient host
origins of new pandemic viruses and, 555
Reciprocal translocation
yeast evolution and comparative genomics, 138
Recombination
DNA replication and recombination interplay in prokaryotes, 43, 50
vaccine-derived polioviruses and global polio eradication, 613–14
yeast evolution and comparative genomics, 146
Recruitment
translational regulation of *GCN4* and amino acid control of yeast, 426–30
type IV secretion systems and, 461–63
Recycling
translational regulation of *GCN4* and amino acid control of yeast, 426–30
Red fluorescent proteins
autofluorescent proteins for microbial ecology in situ studies and, 257, 261–63, 268, 270
Regulation
Acinetobacter baylyi and, 534
Candida albicans growth on surfaces and, 120–23
FtsH protease and, 211, 219–24
mating and sexual cycle in *Candida albicans*, 240–42
Rcs phosphorelay system and signal transduction, 379–99
riboswitches in regulation of gene expression and, 487–511
Theiler's virus and, 279
translational regulation of *GCN4* and amino acid control of yeast, 407–37
yeast evolution and comparative genomics, 145–46
Relaxase
type IV secretion systems and, 453
Relics
yeast evolution and comparative genomics, 137–39
Renilla spp.
autofluorescent proteins for microbial ecology in situ studies and, 260
rep genes
DNA replication and recombination interplay in prokaryotes, 51
Replication fork restart
DNA replication and recombination interplay in prokaryotes, 43, 46, 51–53, 60
Replication proteins
origins of new pandemic viruses and, 553–78
Reporter genes
autofluorescent proteins for microbial ecology in situ studies and, 257, 271
genome-wide responses to DNA-damaging agents and, 359
Rcs phosphorelay system and signal transduction, 381, 384, 391, 393
riboswitches in regulation of gene expression and, 503, 506, 508
Repression
Rcs phosphorelay system and signal transduction, 388
rfa genes
Rcs phosphorelay system and signal transduction, 383, 391–93
Rhabdastrella globostellata
intracellular compartmentation in Planctomycetes and, 317
Rhizobium spp.
autofluorescent proteins for microbial ecology in situ studies and, 266
signaling in arbuscular mycorrhizal symbiosis and, 19, 22, 26–29, 31
Yersinia outer proteins and, 70
Rho-binding domains
Yersinia outer proteins and, 80
Rhodospirella spp.
intracellular compartmentation in Planctomycetes and, 304–5, 307
Rhodospirellula spp.
intracellular compartmentation in

Planctomycetes and, 304–5, 306, 308, 312–13, 318, 320, 322
Rhodospirillum rubrum
intracellular compartmentation in Planctomycetes and, 304
Rho GTPases
Yersinia outer proteins and, 76–80
ribD gene
riboswitches in regulation of gene expression and, 499, 501, 506
Ribonucleotide reductase
genome-wide responses to DNA-damaging agents and, 369
Riboplasm
intracellular compartmentation in Planctomycetes and, 310–12, 315–16
Ribosomal protein S6 kinase 1 (RSK1)
Yersinia outer proteins and, 81
Ribosomes
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 156–62, 164–68, 170–72, 177, 179
diversity and evolution of protein translocation, 101, 103–4
genome trees and, 202, 204
history of research, 10
inner membrane protein biogenesis in *Escherichia coli* and, 329–46
intracellular compartmentation in Planctomycetes and, 303–5, 307–13
Theiler's virus and, 281, 284–85
translational regulation of *GCN4* and amino acid control of yeast, 430–33
vaccine-derived polioviruses and global polio eradication, 590
Riboswitches
bacterial gene expression regulation by adenine riboswitch, 499–500
antisense RNA, 508
applications, 509–11
biological distribution of riboswitch RNAs, 496–98
classification, 492–99
coenzyme B_{12} riboswitch, 501
conclusions, 511
confirmation, 492–99
drug targets, 510–11
FMN riboswitch, 500–1
gene control, 488–92, 504–6
GlcN6P riboswitch, 503
glycine riboswitch, 503
guanine riboswitch, 499–500
introduction, 488
lysine riboswitch, 502–3
metabolic sensing, 490–509
metabolite binding, 499–504
molecular engineering of RNA-based genetic elements, 509–10
mRNA, 491–92, 508–9
natural aptamers, 499–504
organization, 492–93
orphan riboswitch candidates, 503–4
physical cue detection, 491–92
protein factors, 488–92
protein intermediates, 490–91
RNA factors, 488–92
RNA-RNA interactions, 491
SAM riboswitch, 502
transcription attenuation, 506–7
translation initiation, 507–8
TTP riboswitch, 501–2
Rickenberg H, 1
history of research, 5
Rickettsia prowazekii
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
rmc genes
signaling in arbuscular mycorrhizal symbiosis and, 27
rmpA gene
Rcs phosphorelay system and signal transduction, 387
RNA-based genetic elements
riboswitches in regulation of gene expression and, 509–10
RNAi-based screening
genome-wide responses to DNA-damaging agents and, 366, 368
RNA switch
riboswitches in regulation of gene expression and, 487–511
rnbA gene
Acinetobacter baylyi and, 538
RNC complex
inner membrane protein biogenesis in *Escherichia coli* and, 332, 334
Roots
signaling in arbuscular mycorrhizal symbiosis and, 19–32
Rotarod apparatus
Theiler's virus and, 287
rpoBC genes
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 164, 171

rprA gene
Rcs phosphorelay system and signal transduction, 384, 386, 389, 391, 393, 395
r-protein
riboswitches in regulation of gene expression and, 490
rRNA
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 161–62
genome trees and, 202, 204
intracellular compartmentation in Planctomycetes and, 304–5, 312–13
ruvABC operon
DNA replication and recombination interplay in prokaryotes, 48, 51, 54–55

S

Sabin oral poliovirus vaccine strains
vaccine-derived polioviruses and global polio eradication, 592–96, 619–20
Saccharomyces cerevisiae
Candida albicans growth on surfaces and, 118, 122
diversity and evolution of protein translocation, 98
genome-wide responses to DNA-damaging agents and, 359–70, 372–73
history of research, 5, 10
mating and sexual cycle in *Candida albicans*, 233–42, 244–47, 249
translational regulation of *GCN4* and amino acid control of yeast, 407–37
yeast evolution and comparative genomics, 329–46
S-adenosylmethionine (SAM)
riboswitches in regulation of gene expression and, 492, 494, 498, 502, 505–6, 508, 510
Salmonella spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 171–72
intracellular compartmentation in Planctomycetes and, 304
Rcs phosphorelay system and signal transduction, 380, 385, 387–88, 390, 392–93, 397
Yersinia outer proteins and, 70, 72, 83
SAP genes
Candida albicans growth on surfaces and, 119
Sap-sucking insects
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
Scaffolding proteins
Yersinia outer proteins and, 83
Scalindua spp.
intracellular compartmentation in Planctomycetes and, 304, 308, 312, 316
SCH633
intracellular compartmentation in Planctomycetes and, 311
Schizaphus graminum
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 167–68, 174, 176–77
Schizosaccharomyces pombe
mating and sexual cycle in *Candida albicans*, 236
yeast evolution and comparative genomics, 142–44
Schlechtendalia chinensis
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Sec pathway
diversity and evolution of protein translocation, 91–104
Sec translocon
inner membrane protein biogenesis in *Escherichia coli* and, 329–46
Second region of homology (SRH)
FtsH protease and, 214
Secretion monitor protein (SecM)
inner membrane protein biogenesis in *Escherichia coli* and, 332
SecY protein
FtsH protease and, 213–14, 216–17, 221
Segmental duplication
yeast evolution and comparative genomics, 135, 139, 144
Selection
origins of new pandemic viruses and, 553–78
Selenomethionine
history of research, 1
Self-organizing maps
genome-wide responses to DNA-damaging agents and, 362–63
Self-processing
FtsH protease and, 216
Sensor kinase
Rcs phosphorelay system and signal transduction, 379–99
Septicemic plague
Yersinia outer proteins and, 72–73
Sequence divergence
yeast evolution and comparative genomics, 135, 137–38

Serine carboxypeptidase
signaling in arbuscular mycorrhizal symbiosis and, 28
Serine/threonine kinases
Yersinia outer proteins and, 79–80, 83
Serotype distribution
vaccine-derived polioviruses and global polio eradication, 617
Serum inhibitors
origins of new pandemic viruses and, 570
Severe acute respiratory syndrome (SARS)
origins of new pandemic viruses and, 554–55, 578
Shared gene content
genome trees and, 191, 195–97
Sharpshooters
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 170–71
Shigella spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
Rcs phosphorelay system and signal transduction, 380
Yersinia outer proteins and, 83
Shikimate catabolism
Acinetobacter baylyi and, 535, 537
Shine-Dalgarno sequence
riboswitches in regulation of gene expression and, 507
Sialic acid
origins of new pandemic viruses and, 556–57, 567–68, 570
σ factor
FtsH protease and, 213
Signal anchor sequence
inner membrane protein biogenesis in *Escherichia coli* and, 330
Signal recognition particle (SRP)
diversity and evolution of protein translocation, 91, 97–99, 104
inner membrane protein biogenesis in *Escherichia coli* and, 329–35
Signaling
arbuscular mycorrhizal symbiosis and, 19–32
Candida albicans growth on surfaces and, 123–24
diversity and evolution of protein translocation, 97, 99–100
FtsH protease and, 220
genome trees and, 201
mating and sexual cycle in *Candida albicans*, 244–48
Rcs phosphorelay system and signal transduction, 379–99
type IV secretion systems and, 468–69
Yersinia outer proteins and, 69–85
Single-gene deletion
yeast evolution and comparative genomics, 142, 144
Sinorhizobium meliloti
autofluorescent proteins for microbial ecology in situ studies and, 267
Siphoniphus phillyreae
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158
SLN1 gene
Candida albicans growth on surfaces and, 121, 124
Sm7 gene
yeast evolution and comparative genomics, 146
Smallpox model
vaccine-derived polioviruses and global polio eradication, 618
SNF2 gene
genome-wide responses to DNA-damaging agents and, 365
SOS response
DNA replication and recombination interplay in prokaryotes, 43–44, 47, 51, 58–60
genome-wide responses to DNA-damaging agents and, 359–61
SOU1 gene
mating and sexual cycle in *Candida albicans*, 237–38
Specialization
yeast evolution and comparative genomics, 138, 145
Speciation
yeast evolution and comparative genomics, 135, 140–41
Specificity translocation signals
type IV secretion systems and, 468–69
SPI2 pathogenicity island
Yersinia outer proteins and, 72
SPO11 gene
mating and sexual cycle in *Candida albicans*, 249
Spontaneous mutations
Acinetobacter baylyi and, 531–32
Spores
signaling in arbuscular mycorrhizal symbiosis and, 23
yeast evolution and comparative genomics, 140
Spread

vaccine-derived polioviruses and global polio eradication, 612–13
Squalene hopene cyclase
intracellular compartmentation in Planctomycetes and, 311
SRP receptor
inner membrane protein biogenesis in *Escherichia coli* and, 329, 332–33, 340
SSK1 gene
Candida albicans growth on surfaces and, 121, 124
SSU1 gene
yeast evolution and comparative genomics, 141
Starvation
phosphate
signaling in arbuscular mycorrhizal symbiosis and, 19, 24, 30–32
std genes
FtsH protease and, 213
STE genes
mating and sexual cycle in *Candida albicans*, 240, 244, 246–47
Stereospecific permeability
history of research, 1
Sternorrhyncha spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
Sterols
intracellular compartmentation in Planctomycetes and, 311
Strand-invasion protein
DNA replication and recombination interplay in prokaryotes, 45–47
Streptococcus pyogenes
inner membrane protein biogenesis in *Escherichia coli* and, 345
Streptomyces spp.
diversity and evolution of protein translocation, 98–99, 101, 103
Stress response
FtsH protease and, 217
genome-wide responses to DNA-damaging agents and, 363–65
Rcs phosphorelay system and signal transduction, 394
translational regulation of *GCN4* and amino acid control of yeast, 407
Stromatospongia micronesia
intracellular compartmentation in Planctomycetes and, 316–17
Suberon
Acinetobacter baylyi and, 523–26
Substrate transfer
type IV secretion systems and, 465–70
Subtelomeric duplication
yeast evolution and comparative genomics, 135, 137–40
Sulfolobus solfataricus
diversity and evolution of protein translocation, 103
genome trees and, 196
inner membrane protein biogenesis in *Escherichia coli* and, 335
Sulfonamides
history of research, 4
Supercoiling
DNA replication and recombination interplay in prokaryotes, 55
Supertrees
genome trees and, 199–201, 204–5
Supraoperonic clustering
Acinetobacter baylyi and, 523–25
Surfaces
Candida albicans growth on surfaces and, 113–27
Rcs phosphorelay system and signal transduction, 393–95
SWI/SNF complex
genome-wide responses to DNA-damaging agents and, 371
Switches
mating and sexual cycle in *Candida albicans*, 233–34, 238–40, 251
riboswitches in regulation of gene expression and, 487–511
SYM genes
signaling in arbuscular mycorrhizal symbiosis and, 26–28
Symbiosis
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155–81
intracellular compartmentation in Planctomycetes and, 302–3
signaling in arbuscular mycorrhizal symbiosis and, 19–32
Yersinia outer proteins and, 70
SYMRK genes
signaling in arbuscular mycorrhizal symbiosis and, 26–27
Synteny
yeast evolution and comparative genomics, 135, 137–38, 141–42
Synthetic genetic array

genome-wide responses to DNA-damaging agents and, 368
Systemic signaling
signaling in arbuscular mycorrhizal symbiosis and, 30–32
Systems biology
genome-wide responses to DNA-damaging agents and, 357, 368–70, 372

T

T4 endonuclease VII
DNA replication and recombination interplay in prokaryotes, 52
Targeting
diversity and evolution of protein translocation, 97–99
inner membrane protein biogenesis in *Escherichia coli* and, 329–35
Rcs phosphorelay system and signal transduction, 387–90
riboswitches in regulation of gene expression and, 510–11
Tat pathway
diversity and evolution of protein translocation, 91, 99–102
inner membrane protein biogenesis in *Escherichia coli* and, 346
Taxonomy
Acinetobacter baylyi and, 521–22
genome trees and, 202, 204
T cells
Theiler's virus and, 287–88, 291
Yersinia outer proteins and, 73, 77, 85
Telescoping of generations
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 167
Terminal recombination
DNA replication and recombination interplay in prokaryotes, 58
ter sites
DNA replication and recombination interplay in prokaryotes, 51
tert-butyl hydroperoxide (*t*-BuOOH)
genome-wide responses to DNA-damaging agents and, 361–62, 365–66, 369, 371
Tetanus
history of research, 4
Tetraleurodes spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158, 160
Tetraploidy
mating and sexual cycle in *Candida albicans*, 238, 248–50
Th1 T helper cells
Yersinia outer proteins and, 73–74, 85
Theiler's virus
cardioviruses, 283–84
chemokines, 282–83
conclusions, 291–92
cytokines, 282–83
cytotoxic T lymphocytes, 287–88
demyelination, 286–91
early immune evasion, 281–85
gender effect, 288–89
H2 genes, 287–88
inhibition, 282–83
interferon, 282–83
introduction, 280
L protein, 282–85
L* protein, 284–85
macrophages, 285–86
non-*H2* susceptibility loci, 288–89
persistence, 285–91
summary, 292
Tmevd loci, 288–91
Tmevp3 locus, 289–90
viral genes, 281–85
viral tropism, 285–86
Thermotoga spp.
genome trees and, 202
intracellular compartmentation in Planctomycetes and, 318
Thermus spp.
FtsH protease and, 214, 217, 222
inner membrane protein biogenesis in *Escherichia coli* and, 335
Thiamine pyrophosphate
riboswitches in regulation of gene expression and, 492–94, 501–2, 508–9
Thigmotropism
Candida albicans growth on surfaces and, 113, 115, 125–26
thiM gene
riboswitches in regulation of gene expression and, 507–8
Thiomethylgalactoside
history of research, 8–9
Thiosine
riboswitches in regulation of gene expression and, 502
Threonine
history of research, 1, 4–5, 12
Threonyl-tRNA synthetase

riboswitches in regulation of gene expression and, 490
tbrS gene
riboswitches in regulation of gene expression and, 490
Tissue invasion
Candida albicans growth on surfaces and, 113, 115, 119–25, 127
TLC1 gene
yeast evolution and comparative genomics, 146
t-loops
DNA replication and recombination interplay in prokaryotes, 59
Tmev genes
Theiler's virus and, 279, 288–92
tolB gene
Rcs phosphorelay system and signal transduction, 392–93
Toll-like receptors
Yersinia outer proteins and, 69, 73, 76, 81, 84
TPK genes
Candida albicans growth on surfaces and, 121, 124
Trafficking
Acinetobacter baylyi and, 519, 538
genome-wide responses to DNA-damaging agents and, 357, 369
tra genes
type IV secretion systems and, 470
Transcriptional regulation
mating and sexual cycle in *Candida albicans*, 240–42
Transcription attenuation
riboswitches in regulation of gene expression and, 487, 506–7
Transcription factors
Candida albicans growth on surfaces and, 120–23
FtsH protease and, 215
Transcription profiling
genome-wide responses to DNA-damaging agents and, 357, 366
Transcriptomics
autofluorescent proteins for microbial ecology in situ studies and, 258
Transertion complexes
inner membrane protein biogenesis in *Escherichia coli* and, 334
Transfer DNA immunoprecipitation (TrIP)
type IV secretion systems and, 470
Transferrin receptor
origins of new pandemic viruses and, 553, 571–75
Translational regulation
GCN4 and amino acid control of yeast, 407–37
Translation initiation
riboswitches in regulation of gene expression and, 487, 507–8
Translesion synthesis
DNA replication and recombination interplay in prokaryotes, 54
Translocation
diversity and evolution of
evolution, 102–4
introduction, 92–93
mammals, 97–98
origins of protein secretion, 97
Sec-dependent protein translocation, 93–97
Sec pore, 94–97
signals, 97, 99–100
SRP-dependent protein targeting, 97–99
summary, 104
Tat pathway, 99–102
twin-arginine translocation, 99–102
YidC/Oxa1/Alb3-dependent membrane protein insertion, 93–94
yeast evolution and comparative genomics, 137–38, 140–41
Yersinia outer proteins and, 69, 74–75, 82–83
Translocons
FtsH protease and, 216
inner membrane protein biogenesis in *Escherichia coli* and, 329–46
Transmembrane regions
FtsH protease, 218
inner membrane protein biogenesis in *Escherichia coli* and, 337–38, 344–46
Transmission electron microscopy (TEM)
intracellular compartmentation in Planctomycetes and, 307, 309–11, 314–15, 317
Transport
Acinetobacter baylyi and, 534
diversity and evolution of protein translocation, 91–104
type IV secretion systems and, 451–75
Transposases
DNA replication and recombination interplay in prokaryotes, 54
Tremblaya spp.
bacteriocyte-associated endosymbionts of plant

sap-sucking insects and, 155–57, 160–62, 168–70, 172, 174, 179
Treponema pallidum
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 175
Trialeorodes spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158, 160
Tricarboxylic acid (TCA) cycle
yeast evolution and comparative genomics, 141
Trigger factor
inner membrane protein biogenesis in *Escherichia coli* and, 333, 338–39
tRNA
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 168
history of research, 10
translational regulation of *GCN4* and amino acid control of yeast, 417–36
yeast evolution and comparative genomics, 141
Tropism
Theiler's virus and, 285–86
trp genes
Acinetobacter baylyi and, 522
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 167, 176–77
riboswitches in regulation of gene expression and, 507
Trypanosomes
history of research, 6
Tryptophan repressor
history of research, 1, 5–10
Tumor necrosis factor (TNF)
Yersinia outer proteins and, 73–74
Twin-arginine translocation
diversity and evolution of protein translocation, 99–102
Ty gene
yeast evolution and comparative genomics, 141
Type III secretion system (TTSS)
Yersinia outer proteins and, 69–85
Type IV secretion (T4S) systems
ATPase, 463, 471
bases for T4S substrate recognition, 468
biochemical activity, 460
biogenesis, 461–65
catalytic activities, 456–60
cell-position-specific assembly, 465
core complex, 461
C-terminal signals, 468
DNA substrate binding to T4CP receptor, 470–71
energetic requirements, 464–65
gene arrangements, 454–56
integral inner membrane subunits, 471–72
introduction, 452–54
models describing translocation pathway, 473–75
Mpf subunit structures, 456–60
organelles, 454
pathway bifurcation, 463–64
periplasmic outer membrane, 472–73
pilus-associated proteins, 461–63
prospects, 475
recruitment, 461–63
specificity translocation signals, 468–69
structure, 460
substrate recognition checkpoints, 469–70
substrate transfer, 465–70
substrate translocation through secretion channel, 470–73
summary, 475
transfer, 471–72
VirB1, 456
VirB2, 456–57, 472–73
VirB3, 457
VirB4, 457–58
VirB5, 458
VirB6, 458, 471–72
VirB7, 458–59
VirB8, 459, 471–72
VirB9, 459, 472–73
VirB10, 459–60
VirB11, 460, 463, 471

U

ubiG gene
riboswitches in regulation of gene expression and, 508
ugd genes
Rcs phosphorelay system and signal transduction, 393–94
Ultraviolet (UV) radiation
genome-wide responses to DNA-damaging agents and, 365–66, 369, 371
umoB gene
Rcs phosphorelay system and signal transduction, 392
umu genes
genome-wide responses to DNA-damaging agents and, 360
Unstable mutations
Acinetobacter baylyi and, 531–32
Untranslated region (UTR)

riboswitches in regulation of gene expression and, 489, 491–92, 499, 501, 507, 509
vaccine-derived polioviruses and global polio eradication, 589–90
Upstream open reading frames (uORFs)
translational regulation of *GCN4* and amino acid control of yeast, 410–15
Upstream regulation
Rcs phosphorelay system and signal transduction, 392, 399
URA genes
yeast evolution and comparative genomics, 139
Uroleucon ambrosiae
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 176–77
Uromyces appendiculatus
Candida albicans growth on surfaces and, 125
uvr genes
genome-wide responses to DNA-damaging agents and, 360

V

Vaccine-derived polioviruses (VDPVs)
global polio eradication and
aVDPVs, 604, 609–12, 615
basic strategy for polio eradication, 598, 603
biological principles of poliovirus eradication, 598
categories of VDPVs, 604–5
certification of wild poliovirus eradication, 620–21
conclusions, 622–23
containment of poliovirus laboratory stocks, 621
control of polio by immunization, 597–603
coordinated cessation of OPV use, 619
country-by-country cessation of OPV use, 619
current endgame perspectives and challenges, 620–22
cVDPVs, 604, 606–9, 612–16
detection, 622
developed countries, 596, 598–99, 602–3, 605–6, 608–16
developing countries, 596, 598–603, 605–8, 610–16
development of more stable OPV strains, 596–97
development of new OPV strains, 620
early alternative endgame scenarios, 618–20
early attempts to develop improved OPV strains, 593
Egypt, 609
emergence, 612–13
endgame strategy, 617–22
epidemiology, 591
eradication principles revisited, 617–18
establishment of global OPV stockpile, 621–22
extensive antigenic variability, 614
Global Polio Eradication Initiative, 597–603
Guizhou, China, 608–9
Hispaniola, 607
inactivated poliovirus vaccine, 591–92
indefinite use of OPV, 618–19
interruption of wild poliovirus transmission, 620
introduction, 588–89
iVDPVs, 604–7, 613–16, 622
laboratory surveillance for VDPVs, 616–17
long-term poliovirus excretors, 606–7
Madagascar, 608
maintenance of global poliovirus surveillance, 622
multiple, coreplicating lineages, 614
oral poliovirus vaccine, 592–97, 618–21
past VDPV circulation, 609
pathogenesis, 590–91
person-to-person transmission, 614–15
Philippines, 607–8
Poland, 609
poliomyelitis, 590–91
polio outbreaks, 607–9
polioviruses, 589–90
possible examples of VDPV circulation, 609–12
post-eradication challenges, 617
pre-eradication challenges, 617
recombination with species C enteroviruses, 613–14
risk factors, 612–13
Sabin 1, 592–95, 619–20
Sabin 2, 592, 595, 619–20
Sabin 3, 592, 595–96, 619–20
safety record of OPV, 596
sequential removal of Sabin strains from OPV, 619–20
serotype distribution for VDPVs, 617
smallpox model, 618
spread, 612–13
synchronous cessation of OPV use, 621

transition to use of IPV, 619
vaccine-associated paralytic poliomyelitis, 603–4
Vaccines
origins of new pandemic viruses and, 556
van genes
Acinetobacter baylyi and, 525–26, 528, 531–32, 539
Vascular flowering plants
signaling in arbuscular mycorrhizal symbiosis and, 19–32
Vasdavius concursus
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Verrucomicrobia spp.
intracellular compartmentation in Planctomycetes and, 305, 317
Vibrio spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
riboswitches in regulation of gene expression and, 500, 503
VirB/Dr T4S system
type IV secretion systems and, 451–75
Virulence
Rcs phosphorelay system and signal transduction, 398
vaccine-derived polioviruses and global polio eradication, 587, 593–96
Yersinia outer proteins and, 69–71, 77, 79, 82–84
Viruses
FtsH protease and, 215
history of research, 7
mating and sexual cycle in *Candida albicans*, 234
origins of new pandemic viruses and, 553–78
Theiler's virus and, 279–92
vaccine-derived polioviruses and global polio eradication, 587–623
VP genes
origins of new pandemic viruses and, 564, 574
Vryburgia amaryllidis
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160

W

Walker A and B motifs
type IV secretion systems and, 457–58, 465
Welchia perfringens
history of research, 4
Whiteflies
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 155, 165–67
White matter
Theiler's virus and, 279–80
White-opaque switching
mating and sexual cycle in *Candida albicans*, 233, 238–40, 251
Whole-genome duplication
yeast evolution and comparative genomics, 135–39, 142, 144–45
Wigglesworthia spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158, 160, 162, 171, 173–75
Wolbachia spp.
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 158, 175
World Health Organization (WHO)
vaccine-derived polioviruses and global polio eradication, 587–623
wza genes
Rcs phosphorelay system and signal transduction, 386

X

Xanthomonas axonopodis
type IV secretion systems and, 468–69
XerCD resolution system
DNA replication and recombination interplay in prokaryotes, 57–58, 60
*Xbo*I
DNA replication and recombination interplay in prokaryotes, 47
Xis protein
FtsH protease and, 215
xpt genes
riboswitches in regulation of gene expression and, 499–500
X-ray crystallography
FtsH protease and, 214, 217–18
history of research, 1
inner membrane protein biogenesis in *Escherichia coli* and, 336, 338, 341–43
vaccine-derived polioviruses and global polio eradication, 589
XVIP conserved domains
type IV secretion systems and, 469
Xyllela fastidiosa
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 170

Y

yabC gene
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 170
YadA protein
Yersinia outer proteins and, 71, 84
Yarrowia lipolytica
mating and sexual cycle in *Candida albicans*, 242
yeast evolution and comparative genomics, 142–43
YccA protein
FtsH protease and, 216
ydbL gene
riboswitches in regulation of gene expression and, 499
Yeasts
Candida albicans growth on surfaces and, 113, 115–16, 118, 122, 125–26
diversity and evolution of protein translocation, 98, 101
evolution and comparative genomics
chromosomal translocation, 140–41
comparative genomics, 142–47
conserved nonprotein coding sequences, 146
conserved regulatory sites, 145–46
covariation, 146
deletion, 141–42
evolution, 136–42, 144–46
extended aneuploidy, 140
future research, 146–47
gene annotation, 142–43
global yeast phylogeny, 146–47
hybrid yeast, 140
inversion, 141–42
local inversion/deletion, 141–42
metabolic pathway, 145
niche specialization, 145
number of partial and complete genomes available for comparison, 142
phylogenetic footprinting, 145–46
population genomics, 146–47
Saccharomyces cerevisiae, 136, 140–41
segmental duplication, 139
single-gene duplication, 139
single genome, 136
subtelomeric duplication, 139–40
summary, 147
synteny, 141–42
whole–genome duplication, 136–39
genome-wide responses to DNA-damaging agents and, 359–73
history of research, 5, 7, 10, 14
mating and sexual cycle in *Candida albicans*, 233
translational regulation of *GCN4* and amino acid control of yeast, 407–37
Yersinia enterocolitica
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160
Yersinia outer proteins (Yops)
in modulation of host cell signaling and pathogenesis
activation of host signaling responses, 83
conclusions, 83–85
C terminus, 79
cysteine proteases, 79–81
effectors, 77–78, 82–83
GTPase-activating protein, 78–79
host-protective immune responses, 73–74
introduction, 70–71
leucine-rich protein, 81–82
MAP kinases, 80–81
NF-κ B, 80–81
pathogenic *Yersinia* species, 71–72
perspectives, 83–85
pores, 82–83
protein tyrosine phosphatase, 75–77
Rho GTPases, 77–80
Rho proteases, 79
serine/threonine kinase, 79–80
summary, 85
translocation mechanism, 74–75
type III secretion system, 73, 82–83
Y. enterocolitica, 72
YopB, 83
YopH, 75–77
YopJ, 80–81
YopM, 81
YopO, 79–80
YopT, 79
Y. pestis, 72–73
Y. pseudotuberculosis, 72
YidC protein
diversity and evolution of protein translocation, 91–104
inner membrane protein biogenesis in *Escherichia coli* and, 329–31, 337, 339, 343–46
yitJ gene
riboswitches in regulation of gene expression and, 502
yojN gene
Rcs phosphorelay system and signal transduction, 383–84, 390, 397

ypaA gene
riboswitches in regulation of gene expression and, 507
ypd1 gene
Rcs phosphorelay system and signal transduction, 392
yrbAB gene
riboswitches in regulation of gene expression and, 508

Z

Zinc-finger proteins
Theiler's virus and, 279, 281–85, 290, 292
Zn2+
FtsH protease and, 213, 216–17, 219
Zymobacter palmae
bacteriocyte-associated endosymbionts of plant sap-sucking insects and, 160, 166
